advanced automotive engine performance is designed to prepare novice technicians for the challenge of diagnosing today s highly technical electronic engine controls using this curriculum learners will gain familiarity with the operation and variations of emissions systems and associated onboard monitors the curriculum especially focuses on applying diagnostic strategy to and performing service procedures for emissions systems faults learners will also develop an understanding of im testing and an ability to interpret im test reports to aid in diagnosis this objective based curriculum will prepare learners for the challenges of servicing engine management systems in the shop today this is a complete curriculum solution for advanced automotive engine performance online courseware is available and is rich in video and animation to support understanding of complex systems this solution is available in print plus digital or digital only offerings providing ebook and online course pairing with mobile friendly adaptability complete tests tasksheets and instructor resources make this curriculum easy to adopt and integrate into any

automotive program

the power of stem cells for tissue development regeneration and renewal has been well known by embryologists and developmental biologists for many years those presently active in research in the stem cell field owe much to previous work by embryologists and cancer researchers for their insights into what stem cells can do in the last 4 5 years the rapid expansion of the concept of adult tissue stem cells as pluripotent progenitors for various tissues has led to an even greater appreciation of the power of stem cells the demonstration that both embryonic and adult tissue stem cells have the ability to produce progenitor cells for tissue renewal has opened vast possibilities for treatment of congenital deficiency diseases as well as for regeneration of damaged tissues older concepts of determination leading to loss of potential during differentiation of adult tissues are being replaced by newer ideas that cells with multiple potential exist in different forms in various adult organs and that cells thought to be restricted to differentiation to one cell type may be able to transdifferentiate into other tissue cell types thus the concept of embryonic rests in adult tissues hypothesized to be the cellular origin of cancer by durante and conheim in the 1870s now can be expanded to include survival of pluripotential embryonic like stem cells in adult tissues
