this book constitutes the refereed proceedings of the 5th international conference on entertainment computing icec 2006 the 17 revised full papers 17 revised short papers and 28 poster papers presented together with one keynote paper were carefully reviewed and selected the papers are organized in topical sections on agents cultural and psychological metrics transforming broadcast experience culture place play display technology authoring tools object tracking edutainment and network games

this compilation probably looks like one of the craziest things a human being could spend his or her time on yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance this is exactly the story behind this list which appeared first as a few pages within the directory starguides or whatever name it had at that time and as a distinct sister publication since 1990 the idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their

professional activities including traveling perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields it is for this purpose that this dictionary might be most often used scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

this book constitutes the refereed proceedings of the 10th international symposium on methodologies for intelligent systems ismis 97 held in charlotte nc usa in october 1997 the 57 revised full papers were selected from a total of 117 submissions also included are four invited papers among the topics covered are intelligent information systems approximate reasoning evolutionary computation knowledge representation and integration learning and knowledge discovery ai logics discovery systems data mining query processing etc

combining different perspectives from materials science engineering and computer science this reference provides a unified view of the various aspects necessary for the successful realization of intelligent systems the editors and authors are from academia and research institutions with close ties to industry and are thus able to offer first hand information here they adopt a unique three tiered approach such that readers can gain basic intermediate and advanced topical knowledge the technology section of the book is divided into chapters covering the basics of sensor integration in materials the challenges associated with this approach data processing evaluation and validation as well as methods for achieving an autonomous energy supply the applications part then goes on to showcase typical scenarios where material integrated intelligent systems are already in use such as for

structural health monitoring and smart textiles

this book is based on research conducted to investigate whether interactivity yields a learning effect when used appropriately in e learning systems and whether this effect enhances learning there is no doubt interactivity is vital in learning this statement is emphasized to such an extent that it is claimed that students with higher levels of interaction will obtain more positive and higher levels of achievement however little scientific evidence can be found to support this relationship the importance of this book is based on the fact that it provides evidence of the impact of interactivity on e learning systems considering the three main agents of an educational activity the learner the teacher and the environment in addition the concept of feedback as a key element in any interactive mechanism for

enhancing learning is well documented in several studies throughout this book three empirical studies are presented that investigated interactivity within the educational triangle these three studies were conducted based on the framework of positivism and action research paradigms the first study entitled interactive pedagogical feedback gathers evidence for how highly interactive pedagogically designed formative feedback enhances students memory and understanding the second study entitled interactive audio feedback examines whether the speed enhancements of oral feedback improve the conditions for the production of the lecturer s feedback and the quality of the feedback delivered to the students the final study interactive texting feedback takes a pedagogical approach to provide formative feedback to a student audience using mobile text messages and determines whether interactive texting feedback enhances the learning experience within the e learning environment the information contained in the book is useful for academics and institutions to improve their teaching and the efficiency of their learning delivery mechanisms and will guide the design of instructional content it will also be of utility to other researchers and those in roles that require an understanding of interactivity
