critically acclaimed for more than 25 years the methods in cell biology series provides an
indispensable tool for the researcher each volume is carefully edited by experts to
contain state of the art reviews and step by step protocols techniques are described
completely so that methods are made accessible to users this volume methods of cell
matrix adhesion contains integrated coverage on cell matrix adhesion methods it brings

the classical methodologies and the latest techniques together in one concise volume this coverage includes experimental protocols and their conceptual background for all aspects of cell matrix adhesion research the extracellular matrix adhesion receptors and the growing number of functional applications of matrix adhesion in molecular cell biology also covered is the purification of the extracellular matrix to functional analyses of cellular responses

this book provides a novel exploration of the application of nanofiltration membrane technology for sustainability in various industries situated in view of recent breakthroughs and the use of reuse recycle and resource recovery approaches moving from a comprehensive discussion of nanofiltration membrane processes to case studies and real world applications of nanofiltration technology across society both successes and potential limitations are considered features detailed discussion of the fundamentals of nanofiltration technology the concepts of reuse recycle and resource recovery using nanofiltration technology are explored in combination with other technologies to advance circular economy considered across a range of industries such as textiles oil gas agriculture and pharmaceuticals written in a thoroughly detailed manner this book is an essential guide for industry professionals interested in sustainability and working toward a circular economy comprehensive discussions of the fundamental processes underpinning nanofiltration technology also make this book particularly appealing to students of industrial chemistry
