An astonishing book that will lead to rewrite the history of mankind, an unexplored world, a journey beyond the boundaries of human history from over five thousand years. India and Pakistan seem to guard jealously a forgotten past, a secret locked inside of the oldest traditions that human history knows. The journey starts from an highly evolved civilization but fall into oblivion, a culture that left to posterity a huge amount of texts transmitted orally and later merged into Hinduism traditions that speak of lost civilizations, wars fought between men and gods with highly advanced technologies and machines capable of flying in the air and in space called vimana. Following the tracks and studies conducted in the 70s by David William Davenport has set new light on the events that led to the destruction of the city of Mohenjo-daro, Pakistan, and the disappearance of the Harappan civilization, tying their story to submerged ruins discovered in the Indian Ocean and dated back to 10,000 years ago.

This book treats several subjects from the history of mechanism and machine science and also contains an illustrative presentation of the Museum of Engines and Mechanisms of the University of Palermo, Italy, which houses a collection of various pieces of machinery from the last 150 years. The various sections deal with some eminent scientists of the past with the history of industrial installations, machinery and transport with the human inventiveness for mechanical and scientific devices and with robots and human driven automata. All chapters have been written by experts in their fields. The volume shows a wide ranging panorama on the historical progress of scientific and technical knowledge in the past centuries. It will stimulate new research and ideas for those involved in the history of science and technology.
