the movement of an electron around the atomic nucleus has today a great importance in many engineering fields electronics aeronautics micro and nanotechnology electrical engineering optics lasers nuclear power computing equipment and automation telecommunications genetic engineering bioengineering special processing modern welding robotics energy and electromagnetic wave field is today only a few of the many applications of electronic engineering this first chapter presents shortly a new and original relation which calculates the radius with that the electron is running around the atomic nucleus the second chapter presents shortly a new and original relation 20 which calculates the doppler effect exactly this new relation 20 is the exact form and the classical expression 10 is an approximate relation renewable energy is energy which comes from natural resources such as sunlight wind rain tides and geothermal heat which are renewable naturally replenished the share of renewables in electricity generation is around 18 with 15 of global electricity coming from hydroelectricity and 3 from new renewables the third chapter aims to disseminate new methods of obtaining energy after 1950 began to appear

nuclear fission plants the fission energy was a necessary evil in this mode it stretched the oil life avoiding an energy crisis even so the energy obtained from oil represents about 66 of all energy used at this rate of use of oil it will be consumed in about 40 years today the production of energy obtained by nuclear fusion is not yet perfect prepared but time passes quickly we must rush to implement of the additional sources of energy already known but and find new energy sources in these circumstances this chapter comes to proposing possible new energy sources like energies obtained by the annihilation of a particle with its antiparticle
