the united states differs from other developed nations in the extent to which its national bicycle transportation policy relies on the use of unmodified roadways with cyclists obeying the same traffic regulations as motor vehicles this policy known as vehicular cycling evolved between 1969 when the 10 speed boom saw a sharp increase in adult bicycling and 1991 when the american association of state highway and transportation officials adopted an official policy that on road bikeways were not desirable this policy resulted from a growing realization by highway engineers and experienced club cyclists that they had parallel interests the cyclists preferred to ride on highways because most bikeways were not designed for high speeds and pack riding and the highway engineers did not want to divert funding from roadways to construct bikeways using contemporary magazine articles government reports and archival material from industry lobbying groups and national cycling organizations this book tells the story of how america became a nation of bicyclists without bikeways

this book explores the role of private mining rights in the utopian imaginary of space colonisation it presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework in 2015 the us passed laws that would recognise the claims of us corporations to own and sell space resources this unilateral act of pre emptive law making would appear to contravene the terms of the un outer space treaty 1967 which declared that the exploration

and use of outer space should be for the benefit of all mankind and not subject to national appropriation using this central dynamic between privately held mining rights and outer space as a global commons matthew johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity the anticipatory expansion of private property claims beyond the earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property the emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of earth and space this book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights
