What is a computer network? A computer network is a collection of interconnected devices that communicate with each other to share resources, data, and services. These devices can include computers, servers, switches, routers, and other hardware components, all linked through physical or wireless connections. 2. What are the types of computer networks? LAN (Local Area Network): A network confined to a small geographic area like an office or building. WAN (Wide Area Network): A network covering large geographic areas, often interconnected via leased lines or the internet. MAN (Metropolitan Area Network): Spans a city or campus area. PAN (Personal Area Network): Small networks around a person's personal devices like Bluetooth or USB connections. 3. What is the OSI model? The OSI (Open Systems Interconnection) model is a conceptual framework that standardizes the functions of a telecommunication or computing system into seven distinct layers. These layers facilitate

communication between different systems and ensure interoperability. 2 Physical Layer1. Data Link Layer2. Network Layer3. Transport Layer4. Session Layer5. Presentation Layer6. Application Layer7. 4. What is the TCP/IP model? The TCP/IP model is a set of protocols used for communication across interconnected networks like the internet. It has four layers: Network Interface Layer1. Internet Layer2. Transport Layer3. Application Layer4. Networking Devices and Components 5. What is a router? A router is a networking device that forwards data packets between computer networks. It directs traffic based on IP addresses and is crucial for connecting different networks, including the internet. 6. What is a switch? A switch is a network device that connects multiple devices within a LAN and uses MAC addresses to forward data directly to the intended recipient device, thus reducing collisions and increasing network efficiency. 7. What is a hub? A hub is a basic networking device that broadcasts incoming data to all connected ports without regard to MAC addresses. It is less efficient than switches and is largely obsolete. 8. What is a firewall? A firewall is a security device or software that monitors and filters incoming and outgoing network traffic based on predetermined security rules, protecting networks from unauthorized access. 3 9. What is a modem? A modem (modulator-demodulator) converts digital signals from a computer into analog signals for transmission over telephone lines and vice versa, enabling internet access via traditional phone lines. Networking Protocols and Standards 10. What is HTTP? HTTP (Hypertext Transfer Protocol) is the foundation of data communication on the World Wide Web. It defines how messages are formatted and transmitted, and how web servers and browsers should respond to various commands. 11. What is HTTPS? HTTPS is the secure version of HTTP, incorporating encryption through SSL/TLS protocols to ensure secure data transmission between browsers and servers. 12. What is DHCP? DHCP (Dynamic Host Configuration Protocol) automatically assigns IP addresses and other network configuration parameters to devices on a network, simplifying management. 13. What is DNS? DNS (Domain Name System) translates human-readable

domain names (like www.example.com) into IP addresses that computers use to identify each other on the network. 14. What is ARP? ARP (Address Resolution Protocol) maps IP addresses to MAC addresses within a local network, enabling devices to communicate effectively. 15. What is SNMP? SNMP (Simple Network Management Protocol) is used for monitoring and managing network devices such as routers, switches, and servers. IP Addressing and Subnetting 16. What is an IP address? An IP address is a unique numerical label assigned to each device on a network, 4 facilitating identification and communication. 17. What is the difference between IPv4 and IPv6? IPv4: 32-bit addresses, approximately 4.3 billion unique addresses. IPv6: 128-bit addresses, vastly increasing the number of available addresses. 18. What is subnetting? Subnetting is dividing a network into smaller logical sub-networks (subnets), improving routing efficiency and security. 19. How do you calculate a subnet mask? Subnet masks are derived based on the number of desired subnets or hosts per subnet. For example, a subnet mask of 255.255.255.0 (/24) allows for 254 hosts. Routing and Switching 20. What is routing? Routing is the process of selecting paths in a network along which to send network traffic, typically handled by routers. 21. What is static routing? Static routing involves manually configuring routing tables by network administrators, suitable for small networks. 22. What is dynamic routing? Dynamic routing uses routing protocols like RIP, OSPF, or EIGRP to automatically learn and adapt routing paths. 23. What is VLAN? VLAN (Virtual Local Area Network) segments a physical network into multiple logical networks, enhancing security and traffic management. 24. What is Spanning Tree Protocol (STP)? STP prevents loops in network topology by creating a loop-free logical topology for Ethernet networks. 5 Network Security 25. What are common network security threats? Malware and viruses Phishing attacks Denial of Service (DoS) attacks Man-in-the-middle attacks Unauthorized access 26. How can you secure a network? Implement firewalls and intrusion detection systems Use strong passwords and multi-factor authentication Regularly update firmware and software Encrypt

sensitive data Segment networks to limit access 27. What is VPN? A Virtual Private Network (VPN) creates a secure, encrypted connection over an insecure network like the internet, allowing remote access to a private network. Network Troubleshooting and Tools 28. What is ping? Ping is a command-line utility used to test the reachability of a host on an IP network and measure round-trip time. 29. What is traceroute? Traceroute displays the route packets take to reach a destination host, helping diagnose network issues. 30. What is a packet sniffer? A packet sniffer captures network packets for analysis, used for troubleshooting and security auditing. 31. How do you troubleshoot network connectivity issues? Verify physical connections1. 6 Check IP configuration (IP address, subnet mask, default gateway)2. Ping local and remote hosts3. Check DNS resolution4. Use traceroute to identify routing issues5. Inspect network devices for errors or failures6. --- Advanced Networking Concepts 32. What is QoS? Quality of Service (QoS) prioritizes QuestionAnswer What are some common types of network topologies, and which is most widely used? Common network topologies include bus, star, ring, mesh, and tree. The star topology is the most widely used due to its ease of management and fault isolation, especially in LAN environments. Explain the difference between TCP and UDP protocols. TCP (Transmission Control Protocol) is connection-oriented, ensuring reliable data transfer with error checking and flow control, making it suitable for applications like web browsing and email. UDP (User Datagram Protocol) is connectionless, faster, but does not guarantee delivery, used in applications like streaming and online gaming where speed is prioritized. What is subnetting and why is it important in networking? Subnetting is the process of dividing a larger network into smaller, manageable sub-networks or subnets. It improves network performance, enhances security, and makes IP address management more efficient by reducing broadcast domains. Describe the purpose of a VLAN and how it enhances network security. A VLAN (Virtual Local Area Network) segments a physical network into multiple virtual networks. It isolates broadcast traffic and restricts access

between different VLANs, thereby enhancing security by limiting sensitive data exposure and reducing the risk of unauthorized access. What are the key differences between IPv4 and IPv6? IPv4 uses 32-bit addresses, providing around 4.3 billion unique addresses, and is the most widely used. IPv6 uses 128-bit addresses, offering a vastly larger address space, improved routing efficiency, and better security features. IPv6 also includes simplified header formats and supports auto- configuration. 250 Networking Interview Questions and Answers: An In-Depth Guide for Aspiring Professionals In the rapidly evolving world of IT and networking, preparing for interviews can be a daunting task.
