the world's oceans act as a reservoir with the capacity to absorb and retain carbon dioxide the air-sea exchange of carbon is driven by physico-chemical forces photosynthesis and respiration and has an important influence on atmospheric composition variability in the ocean carbon cycle

could therefore exert significant feedback effects during conditions of climate change the joint global ocean flux study jgofs is the first multidisciplinary program to directly address the interactions among the biology chemistry and physics of marine systems with emphasis on the transport and transformations of carbon within the ocean and across its boundaries this unique volume written by an international panel of scientists provides a synthesis of jgofs science and its achievements to date the authoritative chapters will be of great interest to readers seeking a current overview of the role of ocean processes in earth system science and their wider implications for climate change

stable isotope ratios act as naturally occurring tracers for organic matter making possible under certain conditions the quantification of coastal offshore exchanges in general organic matter has isotope ratios characteristic of its origin e g plants with different modes of photosynthesis and different growth conditions anthropogenic compounds these ratios are maintained as the organic matter moves through the biosphere and geosphere a mixture of organic matter from two sources has isotope ratios intermediate between those of the two sources in proportion to the fraction of material from each source isotope ratios are one of the few methods which can trace organic matter as it moves through natural ecosystems ratios can be measured on both the total organic matter and on particular chemical fractions or compounds when used on organisms isotope ratios provide information of organic matter actually assimilated into body tissues not just material ingested as with all tools this method has certain limitations which must be borne in mind when interpreting its results firstly specific environmental conditions must be met this generally means an ecosystem with a limited and known number of sources of organic matter having different isotope ratios two sources with different isotope ratios are ideal additional sources with other isotope ratios complicate interpretation secondly the difference in isotope ratios of the two sources should be large compared with analytical variability thirdly the ratios within each source should vary as little as possible

identifies the scientific requirements of the atmospheric hydrologic and ecologic disciplines for soil moisture observations
