quantitative fluorescence microscopy is concerned with making measurements from fluorescent specimens in a fluorescence microscope by measuring

fluorescence emission from a defined area or areas of a specimen this technique is most commonly used to determine the amount of some specific substance such as dna in some particular area of a cell but it has many other uses for example it can be used to identify certain substances in the cell by examining their fluorescence characteristics this book is a complete guide to this technique for all biologists it describes the principles and applications of quantitative fluorescence microscopy and also gives much practical information about the instrumentation required there is also a discussion of the exciting developments in confocal fluorescence microscopy which allows the three dimensional distribution of particular substances to be determined everyone presently using this technique or wishing to start using it will need to read this book
