our economy and future way of life depend on how well american manufacturing managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace a major challenge is how to structure the firms environment so that it attains the speed and low cost of high volume flow lines while retaining the flexibility and customization potential of a low volume job shop the books three parts are organized according to three categories of skills required by managers and engineers basics intuition and synthesis part i reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing part ii presents the core concepts of the book beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving other topics include behavioral tendencies of manufacturing plants push and pull production systems the human element in operations management and the

relationship between quality and operations chapter conclusions include main points and observations framed as manufacturing laws in part iii the lessons of part i and the laws of part ii are applied to address specific manufacturing management issues in detail the authors compare and contrast common problems including shop floor control long range aggregate planning workforce planning and capacity management a main focus in part iii is to help readers visualize how general concepts in part ii can be applied to specific problems written for both engineering and management students the authors demonstrate the effectiveness of a rule based and data driven approach to operations planning and control they advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems

building lean building bim is the essential guide for any construction company that wants to implement lean construction and building information modelling bim to gain a strategic edge over their competition the first of its kind the book outlines the principles of lean the functionality of bim and the interactions between the two illustrating them through the story of how tidhar construction has implemented lean construction and bim in a concerted effort over four years tidhar is a small to medium sized construction company that pioneered a way of working that gave it a profit margin unheard of in its market the company s story serves as a case study for explanation of the various facets of lean construction and bim each chapter defines a principle of lean and or bim describes the achievements and failures in tidhar s implementation based on the experiences of the key people involved and reviews the relevant background and theory the implementation at tidhar has not been a pure success but by examining their motives alongside their achievements and failures readers will learn about what pitfalls and pinnacles to expect a number of chapters also compare the experience of tidhar with those of other companies who are leaders in their fields such as skanska and dpr this book is highly relevant and useful to a wide range of readers from the construction industry especially those who are frustrated with the inefficiencies in their companies and construction projects it is also essential reading for lean and bim enthusiasts researchers and students from a variety of industries and backgrounds

the book is devoted to the problem of manufacturing scheduling which is the efficient allocation of jobs orders over machines resources in a

manufacturing facility it offers a comprehensive and integrated perspective on the different aspects required to design and implement systems to efficiently and effectively support manufacturing scheduling decisions obtaining economic and reliable schedules constitutes the core of excellence in customer service and efficiency in manufacturing operations therefore scheduling forms an area of vital importance for competition in manufacturing companies however only a fraction of scheduling research has been translated into practice due to several reasons first the inherent complexity of scheduling has led to an excessively fragmented field in which different sub problems and issues are treated in an independent manner as goals themselves therefore lacking a unifying view of the scheduling problem furthermore mathematical brilliance and elegance has sometimes taken preference over practical general purpose hands on approaches when dealing with these problems moreover the paucity of research on implementation issues in scheduling has restricted translation of valuable research insights into industry manufacturing scheduling systems an integrated view on models methods and tools presents the different elements constituting a scheduling system along with an analysis the manufacturing context in which the scheduling system is to be developed examples and case studies from real implementations of scheduling systems are presented in order to drive the presentation of the theoretical insights the book is intended for an ample readership including industrial engineering operations post graduate students and researchers business managers and readers seeking an introduction to the field

managing services is an alternative to the growing service management market in that it is more managerial and procedural placing less emphasis on quantitative tools and more on strategic concerns the benefit of this approach is that it views services from the perspective of the general manager rather than the operations specialist this is important especially considering most students taking this course aspire to and are preparing for managerial positions
