learning strategies for critical thinking are a vital part of today s curriculum as students have few additional opportunities to learn these skills outside of school environments therefore it is essential that educators be given practical strategies for improving their critical thinking skills as well as methods to

effectively provide critical thinking skills to their students the research anthology on developing critical thinking skills in students is a vital reference source that helps to shift and advance the debate on how critical thinking should be taught and offers insights into the significance of critical thinking and its effective integration as a cornerstone of the educational system highlighting a range of topics such as discourse analysis skill assessment and measurement and critical analysis techniques this multi volume book is ideally designed for teachers instructors instructional designers curriculum developers education professionals administrators policymakers researchers and academicians

data analysis has become a necessary skill across the social sciences and recent advancements in computing power have made knowledge of programming an essential component yet most data science books are intimidating and overwhelming to a non specialist audience including most undergraduates this book will be a shorter more focused and accessible version of kosuke imai s quantitative social science book which was published by princeton in 2018 and has been adopted widely in graduate level courses of the same title this book uses the same innovative approach as quantitative social science using real data and r to answer a wide range of social science questions it assumes no prior knowledge of statistics or coding it starts with straightforward simple data analysis and culminates with multivariate linear regression models focusing more on the intuition of how the math works rather than the math itself the book makes extensive use of data visualizations diagrams pictures cartoons etc to help students understand and recall complex concepts provides an easy to follow step by step template of how to conduct data analysis from beginning to end and will be accompanied by supplemental materials in the appendix and online for both students and instructors

in the current educational climate teachers in low performing schools are experiencing pressure from state and district policy makers to raise student performance on state tests some district administrations have undertaken various measures including implementing numerous and specific mathematics content standards adopting particular curricular packages and requiring teachers to use them as their primary instructional materials and even creating pacing guides with uniform timelines for presenting lessons to students these efforts have had the cumulative effect of urging teachers to stick closely to a standard curriculum in order to raise student test scores teachers must also interpret and attend to the needs of their students and ideally teach their students to understand mathematical concepts and processes as opposed to narrowly mastering procedural skills it may not always be possible to both follow administrative mandates about instruction and meet student needs and teachers may have to make a compromise between these two objectives in this study i examined how elementary school teachers in a particular accountability pressured school decided to teach mathematics drawing on multiple interviews and ten classroom observations per teacher i created portraits of the mathematics instructional choices of four second grade teachers including their use of instructional materials such as textbooks i drew on an analytical framework adapted from stein grover and henningsen 1996 to assess various features of the lesson in order to note the interaction between the materials and the teachers decisions about how to use them i developed a lesson signature for each teacher a visual representation of the typical organization of the teacher s lessons and how materials were used within them my findings indicated that the teachers individual goals for their teaching beliefs about their students needs and interpretations of the district s curricular mandates interacted to steer their instructional choices to very different results two of the teachers dutifully followed the textbook while two essentially disregarded it in favor of other materials

teachers own senses of their autonomy to make curricular decisions and their support for their students autonomy in learning math emerged as important factors i suggest implications for teacher professional development and curricular materials development
