you are what you eat it s a saying that we ve all heard time and time again the notion that good nutrition is essential for adequate growth and sound physical wellbeing is very well established further in recent years there has been an overwhelming increase in research dedicated to better understanding how nutritional factors influence cognition and behaviour for example several studies have suggested that higher foetal exposure to omega 3 fatty acids and b vitamins such as folate promotes neurodevelopment b vitamins may also play a role in neurocognitive functioning in later life with some suggestion that lower vitamin b levels are associated with increased risk of dementia although randomised controlled trials investigating b vitamin supplementation as a cognitive enhancer in the elderly have provided inconclusive evidence as to the benefits of such therapy for dementia in fact the nutritional underpinnings of alzheimer s disease and other disorders of cognitive ageing is becoming a much researched topic in addition consumption of several

other foods has been found to convey more acute cognitively enhancing effects for example ingestion of carbohydrates e g glucose caffeine resveratrol and several nutraceutical herbal extracts has been associated with short term improvements in cognitive performance beyond specific micronutrients and macronutrients the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance including attention in the classroom what is clear from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex an aim of this research topic is to bring together some recent empirical findings reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field

the improved survival of very preterm and very low birth weight infants in recent decades has been associated with an increase in the prevalence of physical and neurodevelopmental problems attention is increasingly being focused on the quality of life of survivors who are at greater risk of brain damage and consequent neurological disorders and neuropsychological and behavioural impairments in this volume leading experts present a comprehensive and up to date perspective on research in various aspects of the long term consequences of very preterm birth as well as extending existing knowledge of the neurodevelopmental sequelae following very preterm birth a shared aim of this burgeoning body of research is to identify the mechanisms underlying variations in outcome and thus recognise subgroups of children who are at increased risk of neurodevelopmental problems for whom appropriate intervention strategies can be devised pediatricians neurologists psychiatrists and psychologists will all find this to be essential reading
