the security of cryptographic protocols remains as relevant as ever with systems such as tls and signal being responsible for much of the security guarantees one main venue for the analysis and verification of these protocols has been automated analysis with formal verification tools such as proverif cryptoverif and tamarin indeed these tools have led to confirming security guarantees as well as finding attacks in secure channel protocols including tls

and signal however formal verification in general has not managed to significantly attract a wider audience verifpal is new software for verifying the security of cryptographic protocols building upon contemporary research in symbolic formal verification verifpal s main aim is to appeal more to real world practitioners students and engineers without sacrificing comprehensive formal verification features in order to achieve this verifpal introduces a new intuitive language for modeling protocols that is much easier to write and understand than the languages employed by existing tools at the same time verifpal is able to model protocols under an active attacker with unbounded sessions and fresh values and supports queries for advanced security properties such as forward secrecy or key compromise impersonation verifpal has already been used to verify security properties for signal scuttlebutt tls 1 3 telegram and other protocols it is a community focused project and available under a gplv3 license the verifpal language is meant to illustrate protocols close to how one may describe them in an informal conversation while still being precise and expressive enough for formal modeling verifpal reasons about the protocol model with explicit principals alice and bob exist and have independent states easy to understand analysis output when a contradiction is found for a query the result is related in a readable format that ties the attack to a real world scenario this is done by using terminology to indicate how the attack could have been possible such as through a man in the middle on ephemeral keys friendly and integrated software verifpal comes with a visual studio code extension that offers syntax highlighting and soon live query verification within visual studio code allowing developers to obtain insights on their model as they are writing it
