--- Life Science: Plants, Animals, and Ecosystems

What You Need to Know

Life science is all about living things and their environments. You should understand the basic needs of plants and animals, how they grow, and how they interact in ecosystems.

**Key Concepts**

- Plants and Photosynthesis:** Plants need sunlight, water, air, and nutrients from soil to grow. They make their own food through a process called photosynthesis, which uses sunlight to turn carbon dioxide and water into food.
- Animal Habitats and Adaptations:** Animals live in different habitats like forests, oceans, and deserts. They have adaptations—special features or behaviors—that help them survive in their environment.
- Life Cycles:** Many plants and animals undergo life cycles. For example, a butterfly starts as an egg, then becomes a caterpillar, a chrysalis, and finally an adult butterfly.
- Food Chains and Food Webs:** These show how energy moves through an ecosystem. For example, plants are eaten by insects, which are eaten by birds.

**Study Tips**

- Use diagrams to visualize food chains and life cycles.
- Practice identifying different

habitats and adaptations. - Remember basic needs of living things: food, water, shelter, and air. --- Earth Science: Rocks, Water, Weather, and the Environment What You Need to Know Earth science focuses on our planet, including rocks, water, weather patterns, and the environment. Key Concepts - Rocks and the Rock Cycle: Rocks come in three main types—igneous, sedimentary, and metamorphic. The rock cycle explains how rocks change from one type to another over time. - Weather and Climate: Weather refers to day-to-day conditions like rain, sun, or snow. Climate is the typical weather pattern in a region over a long period. - Water Cycle: This describes how water moves around Earth—through evaporation, condensation, precipitation, and collection. It's essential for all living things. - Natural Resources: Resources like water, minerals, and soil are important but need to be used responsibly. Study Tips - Make a diagram of the water cycle. - Practice sorting different rocks into their types. - Understand how weather affects daily life and the environment. --- Physical Science: Matter, Energy, and Forces What You Need to Know Physical science 5th Grade Science Star Test Study Guide 7 explores how things work, including matter (things that take up space), energy, and forces. Key Concepts - States of Matter: Matter can be a solid, liquid, or gas. For example, ice is a solid, water is a liquid, and steam is a gas. - Properties of Matter: These include color, size, shape, texture, and whether something is heavy or light. - Energy: Energy makes things happen. It can be stored (potential energy) or in action (kinetic energy), like a moving ball. - Simple Machines: Devices that make work easier, such as levers, pulleys, and ramps. - Forces and Motion: Pushes and pulls (forces) cause things to start moving, stop, or change direction. Study Tips - Use physical objects around you to explore properties of matter. - Watch videos or demonstrations about simple machines. - Practice describing how energy moves or changes in everyday life. --- Scientific Skills: Observation, Data, and Making Predictions What You Need to Know Science isn't just facts—it's also about skills like observing carefully, collecting data, and making predictions. Key Concepts -

Observation: Using your senses or tools like magnifiers or rulers to gather information.

- Data Collection: Recording what you observe, often in charts or tables.

- Making Predictions: Using what you know to guess what might happen next.

- Experimentation: Testing ideas to see if they are true.

Study Tips - Practice observing things around your house or yard.

- Keep a science journal to record your observations and data.

- Ask “What do I think will happen?” before experiments or activities.
