organic structure determination using 2 d nmr spectroscopy a  
problem based approach second edition is a primary text for a  
course in two dimensional 2 d nuclear magnetic resonance nmr  
techniques with the goal to learn to identify organic molecular  
structure it presents strategies for assigning resonances to known  
structures and for deducing structures of unknown organic molecules  
based on their nmr spectra the book begins with a discussion of the  
nmr technique while subsequent chapters cover instrumental  
considerations data collection processing and plotting chemical  
shifts symmetry and topicity through bond effects and through space  
effects the book also covers molecular dynamics strategies for  
assigning resonances to atoms within a molecule strategies for  
elucidating unknown molecular structures simple and complex

assignment problems and simple and complex unknown problems each chapter includes problems that will enable readers to test their understanding of the material discussed the book contains 30 known and 30 unknown structure determination problems it also features a supporting website from which instructors can download the structures of the unknowns in selected chapters digital versions of all figures and raw data sets for processing this book will stand as a single source to which instructors and students can go to obtain a comprehensive compendium of nmr problems of varying difficulty presents strategies for assigning resonances to known structures and for deducing structures of unknown organic molecules based on their nmr spectra contains 30 known and 30 unknown structure determination problems features a supporting website from which instructors can download the structures of the unknowns in selected chapters digital versions of all figures and raw data sets for processing
