semiconductors are at the heart of modern living almost everything we do be it work travel communication or entertainment all depend on some feature of semiconductor technology comprehensive semiconductor science and technology six volume set captures the breadth of this important field and presents it in a single source to the large audience who study make and exploit semiconductors previous attempts at this achievement have been abbreviated and have omitted important topics written and edited by a truly international team of experts this work delivers an objective yet cohesive global review of the semiconductor world the work is divided into three sections the first section is concerned with the fundamental physics of semiconductors showing how the electronic features and the lattice dynamics change drastically when systems vary from bulk to a low dimensional structure and further to a nanometer size throughout this section there is an

emphasis on the full understanding of the underlying physics the second section deals largely with the transformation of the conceptual framework of solid state physics into devices and systems which require the growth of extremely high purity nearly defect free bulk and epitaxial materials the last section is devoted to exploitation of the knowledge described in the previous sections to highlight the spectrum of devices we see all around us provides a comprehensive global picture of the semiconductor world each of the work s three sections presents a complete description of one aspect of the whole written and edited by a truly international team of experts

defining hybrid homeschooled in america little platoons explores the idea of hybrid homeschooled where students attend a formal school setting for part of the week and are homeschooled the rest of the week eric wearne observes that school choice in america typically comes in two forms programs set up for disadvantaged students and the more common form of choice that wealthy parents can exercise paying private tuition or moving to a more desirable school district while disadvantaged families in many places and wealthy families everywhere can exercise choice when it comes to schooling a sizeable group typically gets left out of those options the large number of families who are too wealthy to access state or local programs but not wealthy enough to pay for private schooling or moving expenses wearne argues that this is a long term weakness for school choice in america the middle class is generally a well off demographic but is almost completely unserved when it comes to this large aspect of their children s lives however one low cost option has arisen to address this niche hybrid home schools wearne cites existing research to argue for this model s efficacy for the middle class as a strong example of a healthy civil society and examines how policy definitions are breaking down and evolving in education as we challenge the existing definitions of schooling

scientists historians philosophers and theologians often engage in debates on the limitations and mutual interactions of their respective fields of study serious discussions are often overshadowed by the mass produced popular and semi popular literature on science and religion as well as by the political agendas of many of the actors in these debates for some reducing religion and science to forms of social discourse is a possible way out from epistemological overlapping between them yet is there room for religious faith only when science dissolves into one form of social discourse the religion thus rescued would have neither rational legitimisation nor metaphysical validity but if both scientific and religious theories try to make absolute claims on all possible aspects of reality then conflict between them seems almost inevitable in this book leading authors in the field of science and religion including william carroll steve fuller karl giberson and roger trigg highlight the oft neglected and profound philosophical foundations that underlie some of the most frequent questions at the boundary between science and religion the reality of knowledge and the notions of creation life and design in tune with mariano artigas s work the authors emphasise that these are neither religious nor scientific but serious philosophical questions
