defining hybrid homeschools in america little platoons explores the idea of hybrid homeschools where students attend a formal

school setting for part of the week and are homeschooled the rest of the week eric wearne observes that school choice in america typically comes in two forms programs set up for disadvantaged students and the more common form of choice that wealthy parents can exercise paying private tuition or moving to a more desirable school district while disadvantaged families in many places and wealthy families everywhere can exercise choice when it comes to schooling a sizeable group typically gets left out of those options the large number of families who are too wealthy to access state or local programs but not wealthy enough to pay for private schooling or moving expenses wearne argues that this is a long term weakness for school choice in america the middle class is generally a well off demographic but is almost completely unserved when it comes to this large aspect of their children s lives however one low cost option has arisen to address this niche hybrid home schools wearne cites existing research to argue for this model s efficacy for the middle class as a strong example of a healthy civil society and examines how policy definitions are breaking down and evolving in education as we challenge the existing definitions of schooling

scientists historians philosophers and theologians often engage in debates on the limitations and mutual interactions of their respective fields of study serious discussions are often overshadowed by the mass produced popular and semi popular literature on science and religion as well as by the political agendas of many of the actors in these debates for some reducing religion and science to forms of social discourse is a possible way out from epistemological overlapping between them yet is there room for religious faith only when science dissolves into one form of social discourse the religion thus rescued would have neither rational legitimisation nor metaphysical validity but if both scientific and religious theories try to make absolute claims on all possible aspects of reality then conflict between them seems almost inevitable in this book leading authors in the field of science and religion including william carroll steve fuller karl giberson and roger trigg highlight the oft neglected and profound philosophical foundations that underlie some of the most frequent questions at the boundary between science and religion the reality of knowledge and the

notions of creation life and design in tune with mariano artigas s work the authors emphasise that these are neither religious nor scientific but serious philosophical questions
