millions of people worldwide are affected by neurological disorders which disrupt the  
connections within the brain and between brain and body causing impairments of primary  
functions and paralysis such a number is likely to increase in the next years and current

assistive technology is yet limited a possible response to such disabilities offered by the neuroscience community is given by brain machine interfaces bmis and neuroprostheses the latter field of research is highly multidisciplinary since it involves very different and disperse scientific communities making it fundamental to create connections and to join research efforts indeed the design and development of neuroprosthetic devices span involve different research topics such as interfacing of neural systems at different levels of architectural complexity from in vitro neuronal ensembles to human brain bio artificial interfaces for stimulation e g micro stimulation dbs deep brain stimulation and recording e g emg electromyography eeg electroencephalography lfp local field potential innovative signal processing tools for coding and decoding of neural activity biomimetic artificial spiking neural networks snn and neural network modeling in order to develop functional communication with the nervous system and to create a new generation of neuroprostheses the study of closed loop systems is mandatory it has been widely recognized that closed loop neuroprosthetic systems achieve more favorable outcomes for users than equivalent open loop devices improvements in task performance usability and embodiment have all been reported in systems utilizing some form of feedback the bi directional communication between living neurons and artificial devices is the main final goal of those studies however closed loop systems are still uncommon in the literature mostly due to requirement of multidisciplinary effort therefore through ebook on closed loop systems for next generation neuroprostheses we encourage an active discussion among neurobiologists electrophysiologists bioengineers computational neuroscientists and neuromorphic engineers this ebook aims to facilitate this process by ordering the 25 contributions of this research in which we highlighted in three different parts a optimization of different blocks composing the closed loop system b systems for neuromodulation based on dbs emg and snn and c closed loop bmis for rehabilitation

proceedings of the first international air tr this book presents the proceedings of the first international air transport and operations symposium atos 2010 held at the delft university of technology in the netherlands the focus of atos 2010 and these proceedings is on how air transport can evolve

the regulated secretory pathway is a hallmark of neuroendocrine cells this process comprises many sequential steps which include er associated protein synthesis post translational modification of proteins in the golgi complex sorting and packing of secretory proteins into carrier granules cytoskeleton based granule transport towards the plasma membrane and tethering docking and fusion of granules with specialized releasing zones each stage is subjected to a rigorous regulation by a plethora of factors that function in a spatially and temporarily coordinated fashion much effort has been devoted to characterize the precise role of the regulatory proteins participating in the different steps of this process and to identify new factors in order to obtain a unifying picture of the secretory pathway in spite of this and given the enormous complexity of the process certain stages are not fully understood yet and many players remain to be identified the aim of this research topic is to gather review articles and original research papers on the molecular mechanisms that govern and ensure the correct release of neuropeptides

this book constitutes the refereed proceedings of the 4th international workshop on hybrid

metaheuristics hm 2007 held in dortmund germany the 14 revised full papers discuss specific aspects of hybridization of metaheuristics hybrid metaheuristics design development and testing with increasing attention to methodological aspects from both the empirical and theoretical sides the papers show a representative sample of research in the field of hybrid metaheuristics

the fourth siam international conference on data mining continues the tradition of providing an open forum for the presentation and discussion of innovative algorithms as well as novel applications of data mining this is reflected in the talks by the four keynote speakers who discuss data usability issues in systems for data mining in science and engineering issues raised by new technologies that generate biological data ways to find complex structured patterns in linked data and advances in bayesian inference techniques this proceedings includes 61 research papers

genomic imprinting a parent of origin specific epigenetic modification of the genome is observed in placental mammals and some plants angiosperms since its discovery in the early

1980s this intriguing phenomenon has been intensively investigated and has spawned an exciting new research area imprinting is relevant to a variety of biological events such as embryogenesis growth and behavior and its disruption can lead to congenital malformation syndromes and cancers furthermore imprinting has been serving as an excellent model system to study epigenetic mechanisms of gene regulation and helping us to understand how gene clusters and genome domains are regulated this special issue provides an overview of the current knowledge of genomic imprinting including both excellent reviews and original research articles by outstanding researchers in the field many of which were participants of the genomic imprinting workshops in montpellier september 2004 and oxford april 2005 it represents the forefront of imprinting research

artificial intelligence ai plays a vital part in the continued development of computer science and informatics the ai applications employed in fields such as medicine economics linguistics philosophy psychology and logical analysis not forgetting industry are now indispensable for the effective functioning of a multitude of systems this book presents the papers from the 20th biennial european conference on artificial intelligence ecai 2012 held in montpellier france in august 2012 the ecai conference remains europe s principal opportunity for researchers and practitioners of artificial intelligence to gather and to discuss the latest trends and challenges in all subfields of ai as well as to demonstrate innovative applications and uses of advanced ai technology ecai 2012 featured four keynote speakers an extensive workshop program seven invited tutorials and the new frontiers of artificial intelligence track in which six invited speakers delivered perspective talks on particularly interesting new research results directions and trends in artificial intelligence or in one of its related fields the proceedings of pais 2012 and the system demonstrations track are also included in this volume which will be of interest to all those wishing to keep abreast of the latest developments in the field of ai
