Donaldson Time, inc MARTIN K. ETTINGTON

leofranc holford strevens explores time measurement and the organisation of time into hours days months and years using a range of fascinating examples from ancient rome and julius caesar s leap year to the 1920s project for a fixed easter

an anniversary edition of a now classic survey of the origin and nature of the universe features a new introduction by the author and a new chapter on the possibility of time travel and wormholes in space

the history of jews from the period of the second temple to the rise of islam from a history of the mishnaic law of appointed times part 1 this volume introduces the sources of judaism in late antiquity to scholars in adjacent fields such as the study of the old and new testaments ancient history the ancient near east and the history of religion in two volumes leading american israeli and european specialists in the history literature theology and archaeology of judaism offer factual answers to the two questions that the study of any religion in ancient times must raise the first is what are the sources written

and in material culture that inform us about that religion the second is how have we to understand those sources in reconstructing the history of various judaic systems in antiquity the chapters set forth in simple statements intelligible to non specialists the facts which the sources provide because of the nature of the subject and acute interest in it the specialists also raise some questions particular to the study of judaism dealing with its historical relationship with nascent christianity in new testament times the work forms the starting point for the study of all the principal questions concerning judaism in late antiquity and sets forth the most current critical results of scholarship

a brief history of the philosophy of time is a concise and accessible survey of the history of philosophical and scientific developments in understanding time and our experience of time it discusses prominent ideas about the nature of time plus many subsidiary puzzles about time from the classical period through the present

the aim of this book is to explain in simple language what we know about time and about the history of time it is shown that the briefest as well as the lengthiest history of time can be described in one or two pages the second purpose of the book is to show that neither entropy nor the second law of thermodynamics has anything to do with time the third purpose is to educate the lay reader how to read popular science books critically towards this goal detailed reviews of four books on time are presented there are many popular science books on time on the beginning of time and the end of time this book is unique in the following two senses it explains in simple terms what time is and why it is not related to entropy it critically reviews a few popular science books which perpetuate all kinds of unfounded ideas about the relationship between time and the second law

2022 national indie excellence awards winner history general inherently interesting unique and highly recommended addition to personal professional community college and academic library physics of time scientific measurement history collections and supplemental curriculum studies lists midwest book review a wonderful look into understanding and recording time orzel s latest is appropriate for all readers who are curious about those ticks and tocks that mark nearly every aspect of our lives booklist a thorough enjoyable exploration of the history and science behind measuring time foreword reviews it s all a matter of time literally from the movements of the spheres to the slipperiness of relativity the story of science unfolds through the fascinating history of humanity s efforts to keep time our modern lives are ruled by clocks and watches smartphone apps and calendar programs while our gadgets may be new however the drive to measure and master time is anything but and in a brief history of timekeeping chad orzel traces the path from stonehenge to your smartphone predating written language and marching on through human history the desire for ever better timekeeping has spurred technological innovation and sparked theories that radically reshaped our understanding of the universe and our place in it orzel a physicist and the bestselling author of breakfast with einstein and how to teach quantum physics to your dog continues his tradition of demystifying thorny scientific concepts by using the clocks and calendars central to our everyday activities as a jumping off point to explore the science underlying the ways we keep track of our time ancient solstice markers which still work perfectly 5 000 years later depend on the basic astrophysics of our solar system mechanical clocks owe their development to newtonian physics and the ultra precise atomic timekeeping that enables gps hinges on the predictable oddities of quantum mechanics along the way orzel visits the delicate negotiations involved in gregorian calendar reform the intricate and entirely unique system employed by the maya and how the problem of synchronizing clocks at different locations ultimately required us to

abandon the idea of time as an absolute and universal quantity sharp and engaging a brief history of timekeeping is a story not just about the science of sundials sandglasses and mechanical clocks but also the politics of calendars and time zones the philosophy of measurement and the nature of space and time itself for those interested in science technology or history or anyone who's ever wondered about the instruments that divide our days into moments the time you spend reading this book may fly and it is certain to be well spent

our critically acclaimed smash hit cartographies of time is now available in paperback in this first comprehensive history of graphic representations of time authors daniel rosenberg and anthony grafton have crafted a lively history featuring fanciful characters and unexpected twists and turns from medieval manuscripts to websites cartographies of time features a wide variety of timelines that in their own unique ways curving crossing branching defy conventional thinking about the form a fifty four foot long timeline from 1753 is mounted on a scroll and encased in a protective box another timeline uses the different parts of the human body to show the genealogies of jesus christ and the rulers of saxony ladders created by missionaries in eighteenth century oregon illustrate bible stories in a vertical format to convert native americans also included is the april 1912 marconi north atlantic communication chart which tracked ships including the titanic at points in time rather than by their geographic location alongside little known works by famous figures including a historical chronology by the mapmaker gerardus mercator and a chronological board game patented by mark twain presented in a lavishly illustrated edition cartographies of time is a revelation to anyone interested in the role visual forms have played in our evolving conception of history

time is a fascinating subject and one which affects our lives in many ways this book covers a lot of aspects of the subject first how did measurements of time like seconds minutes hours and years develop next what is the history of timekeeping mechanism from ancient water clocks to mechanical mechanisms atomic clocks and much more lastly what are some of the stranger aspects or anomalies of time such as premonitions how time and space work and possible time travel stories and philosophical questions like does the future already exist i wanted this book to be a comprehensive volume on time and so included lots of different stories and understandings about time which indicate we may not fully understand it yet
