what is economics missing link recent economic crises have had a devastating impact on society worryingly they gravely risked a collapse of the financial system these crises also painfully revealed economics blind spots crucially economics is not an innocent bystander but central to

the problem in this pioneering book patrick schotanus explains that economics mechanical worldview is the ontological error which leads to flawed thinking and faulty practices the market mind hypothesis mmh thus calls it mechanical economics it not only erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm central to mmh s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by market mood specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room the book argues that if mechanical economics is the answer we have been asking the wrong questions moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both with a foreword by investment strategist russell napier an intermezzo by neuroscientist and complexity pioneer scott kelso and an afterword by 4e cognition philosopher julian kiverstein

the cognitive basis of institutions a synthesis of behavioral and institutional economics synthesizes modern research in behavioral economics

with traditional institutional economics this work emphasizes that institution and agent are inextricably linked and that both cognitive and institutional processes coalesce to influence human decision making it integrates cognition and institution through the behavioral economics theoretical lens of bounded rationality methodologically it develops game theoretical complexity and neuroeconomic solutions to unite study of the two areas the work concludes by proposing general implications for the economic study of decisions using the cognitive institutional approach also providing specific recommendations for public policy
