it is impossible to perceive the innumerable stimuli impinging on our senses all at once out of the myriad stimuli external and internal a few are selected for further processing and even among these we try to put each in some sort of relation with the others to be able to make some sense

about them all time of course is an elementary dimension we use to organize our experiences thus the perception of sequences is basic to human cognition nevertheless research addressing sequences is rather sparse partly this is due to difficulty in designing experiments in this area due to huge individual differences then there is the assumption that temporal order has more to do with memory than perception another problem is that sequences seem endemic to the auditory world so much so that some researchers have suggested that sound provides the auditory scaffolding for sequencing behavior little wonder that research studies addressing sequences in modalities other than audition are extremely rare this research topic aimed to gather a holistic picture of sequencing behaviour among humans by collecting snapshots of the current research on the topic of sequencing we particularly sought contributions which addressed sequences beyond the auditory modality the single unifying criteria for these diverse contributions was that they shed new light on previously unexplored empirical relationships and or provoked new lines of research with incisive ideas regarding sequencing behavior seasoned researchers contributed their views on perception memory and production of sequences

ceccarelli offers a history of the development of letter writing in ancient greece from the archaic to the early hellenistic period highlighting the specificity of letter writing the volume looks at documentary letters and traces the role of embedded letters in the texts of the ancient historians in drama and in the speeches of the orators

two noted researchers explain scientific evidence that shows why certain experiential and lifestyle factors may promote and maintain cognitive vitality in older adults although our physical abilities clearly decline as we age cognitive decline in healthy old age is neither universal nor inevitable in nurturing the older brain pamela greenwood and raja parasuraman show that scientific research does not support the popular notion of the inexorable and progressive effects of cognitive aging in all older adults they report that many adults maintain a high level of cognitive function into old age and that certain experiential and lifestyle factors including education exercise diet and opportunities for new learning contribute to the preservation of cognitive abilities many popular accounts draw similar conclusions and give similar lifestyle advice but lack supporting scientific evidence greenwood and parasuraman offer a comprehensive review of research on cognitive and brain aging they show that even the aged brain remains capable of plasticity the ability to adapt to and benefit from experience and they summarize evidence that brain plasticity is heightened by certain types of cognitive training by aerobic exercise and by certain diets they also report on the somewhat controversial use of estrogen and cognition enhancing drugs on environmental adaptations including virtual assistants that help older adults age in place and on genetic factors in cognitive aging the past twenty years of research points to ways that older adults can lead rich and cognitively vital lives as millions of baby boomers head toward old age greenwood and parasuraman s accessible book could not be more timely

efficient auditory processing requires the rapid integration of transient sensory inputs this is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time spoken language thus presents listeners auditory

systems with a considerable challenge even when acoustic input is clear however auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants how does loss of sensory fidelity impact neural processing efficiency and health how does this ultimately influence behavior this research topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception by pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning

this volume is based on a conference held at dartmouth college s minary conference center in holderness new hampshire june 4 7 1981 the conference brought together a number of investigators whose separate lines of inquiry bear in significant ways on the relationships among perception cognition and development the purpose was to consider interactions among these basic processes not only as a critical facet of the research programs of the participants but also as a central conceptual problem for current theoretical psychology first published in 1983 routledge is an imprint of taylor francis an informa company
