this volume comprises the proceedings of the international workshop shapemi 2023 which took place alongside miccai 2023 on october 8 2023 in vancouver british columbia canada the 23 selected full papers deal with all aspects of leading methods and applications for advanced shape analysis and geometric learning in medical imaging

a thoroughly revised and updated edition of this introduction to modern statistical methods for shape analysis shape analysis is an important tool in the many disciplines where objects are compared using geometrical features examples include comparing brain shape in schizophrenia investigating protein molecules in bioinformatics and describing growth of organisms in biology this book is a significant update of the highly regarded statistical shape analysis by the same authors the new edition lays the foundations of landmark shape analysis including geometrical concepts and statistical techniques and extends to include analysis of curves surfaces images and other types of object data key definitions and concepts are discussed throughout and the relative merits of different approaches are presented the authors have included substantial new material on recent statistical developments and offer numerous examples throughout the text concepts are introduced in an accessible manner while retaining sufficient detail for more specialist statisticians to appreciate the challenges and opportunities of this new field computer code has been included for instructional use along with exercises to enable readers to implement the applications themselves in r and to follow the key ideas by hands on analysis offers a detailed yet accessible treatment of statistical methods for shape analysis includes numerous examples and applications from many disciplines provides r code for implementing the examples covers a wide variety of recent developments in shape analysis shape analysis with applications in r will offer a valuable introduction to this fast moving research area for statisticians and other applied scientists working in diverse areas including archaeology bioinformatics biology chemistry computer science medicine morphometrics and image analysis

this book considers specific inferential issues arising from the analysis of dynamic shapes with the attempt to solve the problems at hand using probability models and nonparametric tests the models are simple to understand and interpret and provide a useful tool to describe the global dynamics of the landmark configurations however because of the non euclidean nature of shape spaces distributions in shape spaces are not straightforward to obtain the book explores the use of the gaussian distribution in the configuration space with similarity transformations integrated out specifically it works with the offset normal shape distribution as a probability model for statistical inference on a sample of a temporal sequence of landmark configurations this enables inference for gaussian processes from configurations onto the shape space the book is divided in two parts with the first three chapters covering material on the offset normal shape distribution and the remaining chapters covering the theory of nonparametric combination npc tests the chapters offer a collection of applications which are bound together by the theme of this book they refer to the analysis of data from the fg

net face and gesture recognition research network database with facial expressions for these data it may be desirable to provide a description of the dynamics of the expressions or testing whether there is a difference between the dynamics of two facial expressions or testing which of the landmarks are more informative in explaining the pattern of an expression

since 1950 s computational techniques have been widely applied in textile industry and garment industry for process and materials structure modeling simulation and control optimization of product quality product design textile market forecasting and production management the related computational techniques include classical methods such as statistics differential equations classical signal and image processing and statistical pattern recognition and intelligent techniques such as soft computing and data mining this edited book collects a number of representative applications of computational techniques in textile and garment industry these applications cover the following issues textile quality assessment by image analysis modeling and simulation of textile structures computer aided garment design computerized textile management and textile supply chain textile quality subjective and objective evaluation computational thermal bioengineering of textiles and clothing computational biomechanical engineering of textiles and clothing
