this thesis develops several systematic and unified approaches for analyzing dynamic systems with positive characteristics or a more general cone invariance property based on these analysis results it uses linear programming tools to address static output feedback synthesis problems with a focus on optimal gain performances owing to their low computational complexity the established controller design algorithms are applicable for large scale systems the theory and control strategies developed will not only be useful in handling large scale positive delay systems with improved solvability and at lower cost but also further our understanding of the system characteristics in other related areas such as distributed coordination of networked multi agent systems formation control of multiple robots

this timely book deals with a current topic i e the applications of metaheuristic algorithms with a primary focus on optimization problems in civil engineering the first chapter offers a concise overview of different kinds of metaheuristic algorithms explaining their advantages in solving complex engineering problems that cannot be effectively tackled by traditional methods and citing the most important works for further reading the remaining chapters report on advanced studies on the applications of certain metaheuristic algorithms to specific engineering problems genetic algorithm bat algorithm cuckoo search harmony search and simulated annealing are just some of the methods presented and discussed step by step in real application contexts in which they are often used in combination with each other thanks to its synthetic yet meticulous and practice oriented approach the book is a perfect guide for graduate students researchers and professionals willing to applying metaheuristic algorithms in civil engineering and other related engineering fields such as mechanical transport and geotechnical engineering it is also a valuable aid for both lectures and advanced engineering students
