for thousands of years it is generally believed that mathematics begins with the natural numbers and counting but there is something more fundamental than counting it is the grouping of things if a child is shown a picture of a farm with sheep and cows here and there and asked to count the number of sheep the child would first put the sheep in a group mentally and then count the number of sheep in the group without grouping counting cannot happen therefore mathematics begins with the grouping of objects which is the object of study of set theory in this book we explore the fundamental concepts of sets and related topics propositional logic methods of proof relations and functions unlike the technical approach adopted in most books we use many everyday examples to show that these concepts can be found everywhere in our daily life the book also has plenty of exercises and solutions to all exercises are provided
