science occupies a powerful place in schools and societies more generally but what are the boundaries of science and how should it be represented in schools michael reiss s inaugural professorial lecture at the institute of education university of london addresses these questions he argues that there is a need to develop science curricula and teaching approaches to broaden what is commonly taught in school science such a move makes intellectual sense is what pupils want and is feasible it should lead to science teaching being more satisfying for pupils and science teachers alike

science education particularly school science education has long had an uneasy relationship with ethics being unsure whether to embrace ethics or leave it to others in this book the authors argue that while the methods of science and of ethics are very different ethics plays a key role in how science is undertaken and used and so ethics has a central place in science education whether we are talking of school science education for students of all ages or the informal science education that takes place in through internet books magazines tv and radio or in places such as hospitals and zoos written for science educators based in schools and elsewhere the authors make no assumptions that the reader has any knowledge of ethics beyond the background understandings of morality that virtually all of us have empowered with the knowledge shared in this book readers will feel confident about the place that ethics has in science education the authors provide a rich array of examples as to how science education both in school and out of school and for all ages can be enhanced through including teaching about ethics

if you think your job is hopelessly difficult you may be right particularly if your job is

public administration those who study or practice public management know full well the difficulties faced by administrators of complex bureaucratic systems what they don't know is why some jobs in the public sector are harder than others and how good managers cope with those jobs drawing on leadership theory and social psychology Erwin Hargrove and John Glidewell provide the first systematic analysis of the factors that determine the inherent difficulty of public management jobs and of the coping strategies employed by successful managers to test their argument Hargrove and Glidewell focus on those jobs fraught with extreme difficulties impossible jobs what differentiates impossible from possible jobs are 1 the publicly perceived legitimacy of the commissioner's clientele 2 the intensity of the conflict among the agency's constituencies 3 the public's confidence in the authority of the commissioner's profession and 4 the strength of the agency's myth or long term idealistic goal Hargrove and Glidewell flesh out their analysis with six case studies that focus on the roles played by leaders of specific agencies each essay summarizes the institutional strengths and weaknesses specifies what makes the job impossible and then compares the skills and strategies that incumbents have employed in coping with such jobs readers will come away with a thorough understanding of the conflicting social psychological and political forces that act on commissioners in impossible jobs
