water pollution occurs when toxic pollutants of varying kinds organic inorganic radioactive and so on are directly or indirectly discharged into water bodies without adequate treatment to remove such potential pollutants today s sources of these potential pollutants which cause high deterioration of freshwater quality are city sewage and industrial waste discharge human agricultural practices industrial waste disposal practices mining activities civil and structural work activities and obviously natural contamination with climate change when our water is polluted it is not only devastating to the environment but also to human health therefore development of water and wastewater treatment processes to alleviate water pollution has been a challenging

and demanding task for engineers scientists and researchers perhaps this is even more challenging for underdeveloped and developing countries where water and wastewater treatment facilities knowledge and infrastructure are limited water and wastewater treatment processes are broad and often multidisciplinary in nature comprising a mixture of research areas including physical chemical and biological methods to remove or transform various potential pollutants this is in hopes to achieve acceptable water quality and satisfy governmental and environmental protection agencies laws and regulations with these objectives this book has been written in order to provide various research results and compilation and up to date development on the current states of knowledge and techniques in the broad field of water and wastewater treatment processes basically this book will give a comprehensive understanding and advancement and application of various physical chemical and biological treatment methods in the reduction of potential pollutants inorganics organics from water and wastewater there are a total 18 book chapters contributed by large number of expert authors around the world covering the following main research areas physical chemical and biological water treatment processes such as adsorption biosorption coagulation flocculation electrocoagulation denitration membrane filtration separation photo catalytic reduction advanced oxidation nutrients removal by struvite crystallization and nanotechnology physical chemical and biological methods for municipal wastewater and industrial wastewater treatment plants such as primary secondary sludge treatments anaerobic digestions aerobic treatment activated sludge processes dewaterability by flocculants pre treatments of sludge and rheology of sludge in wastewater treatment various operational units equipment and process control of wastewater treatment plant

this is an extremely well researched and documented book the authors hypothesis is that the current water and wastewater sector is failing the populations of the western world by clinging to orthodox and short term visions of new technology and innovation and also failing the developing nations by believing that delivery of western world high technology solutions is a contribution to humanitarian development this is the crisis of innovation to many practitioners in the water industry the book will be perceived to be hypercritical of the incrementalism conservative and dogged traditionalism of the sector but in fact it is stimulating and positive in the latter chapters an alternate more holistic model of water development is described there needs to be a movement from large central infrastructure resources to distributed systems that are more appropriate to local needs and can be coupled with environmentally sustainable energy sources and practices tim lack european topic centre on water uk whilst acknowledging a massive leap from standpipe to universal water provision in 100 years in developed countries the authors of this book see problems for global sustainable water supply and wastewater removal in the future using the uk water industry as an

example they describe the global water industry as risk averse and unwilling to innovate a view that is encouraged by the institutional and financial regimes under which it works the book explores the reasons for concern and sets out some hard hitting views on how the water industry is failing to identify and tackle the essential problems in a world which is becoming ever more depleted of fresh water the concluding chapter brings to a focus the problems of the crisis in innovation and gives some concrete suggestions for tackling them this volume should raise the awareness of policymakers and regulators technologists and concerned members of the public peter chave independent consultant and formerly head of pollution control national rivers authority uk this significant new book highlights a little acknowledged but potentially catastrophic crisis of innovation in the global water sector which institutions and industries are frighteningly ill equipped to tackle or even accept it suggests potential new technology and policy approaches to overcome both current and future problems the book explores how technological innovation is vital to help provide sustainable water in both the uk and developing countries however innovation is being overlooked in the face of global trends to privatize and regulate water utilities the authors highlight how the global water sector is failing to respond to increasingly complex world needs and continues to build largely unsustainable centralized infrastructures opposing more appropriate distributed and local modern technologies the book also includes suggestions for potentially innovative technology and policy solutions to meet escalating global water and wastewater demands importantly the authors adopt a long term perspective that crosses both disciplinary and institutional boundaries and include an international comparative perspective covering a diverse range of examples and countries this comprehensive book will have a broad appeal amongst researchers and academics with an interest in technology management innovation studies geography and development studies it will also be a valuable asset for water regulators and governmental and non governmental organisations working in this field
