modeling and simulation of batteries in conjunction with theory and experiment are important research tools that offer opportunities for advancement of technologies that are critical to electric motors the development of data from the application of these tools can provide the basis for managerial and technical decision making together these will continue to transform batteries for electric vehicles this collection of nine papers presents the modeling and simulation of batteries and the continuing contribution being made to this impressive progress including topics that cover thermal behavior and characteristics battery management system design and analysis moderately high fidelity 3d capabilities optimization techniques and durability as electric vehicles continue to gain interest from manufacturers and consumers alike improvements in economy and affordability as well as adoption of alternative fuel sources to meet government mandates are driving battery research and development progress in modeling and simulation will continue to contribute to battery improvements that deliver increased power energy storage and durability to further enhance the appeal of electric vehicles

the 31 individual authored papers from the breakout sessions are contained in volume 2 pub desc

l he papers contained in this volume were originally presented at the international symposium on new directions in urban systems modelling held at the university of waterloo in july 1983 the papers have been reviewed and rewritten since that time the exception is the introductory paper written specially by manfred fischer and peter nijkamp as an introduction to this volume the manuscript was prepared in the word processing unit in the neperament of civil engineering university of waterloo the sustained work of mrs i steffler in preparing this manuscript is gratefully acknowledged r r k kumar provided excellent assistance with the editorial process the svrnposium and the preparation of this manuscript were

supported financially by the natural sciences and engineering research council of canada the academic development fund and the department of civil engineering ttniversity of waterloo table of contents preface iii categorical data and choice analysis in a spatial context manfred fischer and peter nijkamp

this report from the second strategic highway research program shrp 2 which is administered by the transportation research board of the national academies explores the underlying conceptual foundations of travel modeling and traffic simulation and provides practical means of generating realistic reliability performance measures using network simulation models

in the last four decades southeastern archaeology has increasingly developed a processual method of looking at archaeological data through varying levels of scale by adjusting the scale archaeologists can further define societal interactions and exchanges which is particularly useful to those researching the mississippian period as the rise and fall of chiefdoms was both internally complex and externally influenced by broader regional factors this use of the most current research methods has enabled a more comprehensive understanding of prehistoric and historic sociopolitical entities in archaeological perspectives of the southern appalachians ramie a gougeon and maureen s meyers have brought together a dozen archaeologists to delineate multiscale approaches to native american sites throughout southern appalachia the essays range in topic from ceramic assemblages in northern georgia to public architecture in north carolina to the frontiers of southern appalachia in virginia throughout the volume the contributors discuss varying scales of analysis in their own research to flesh out the importance of maintaining different perspectives when evaluating archaeological evidence additionally the volume makes particular reference to the work of david hally whose influence on not only the editors and contributors but on southeastern archaeology as a whole cannot be overstated while hally was neither a pioneer nor vocal champion of scale variation his impeccable research culminating with the publication of his magnum opus king the social archaeology of a late mississippian town in northwestern georgia paved the way for younger scholars to truly develop research methods for holistic social archaeology

this report examined several methods for estimating origin destination od matrices for freeways using loop detector data least squares based methods were compared in terms of both off line and on line estimation simulated data and observed data were used for evaluating the static and recursive estimators for off line estimation four fully constrained least squares

methods were compared the results showed that the variations of a constrained least squares approach produced more efficient estimates for on line estimation two recursive least squares algorithms were examined the first method extends kalman filtering to satisfy the natural constraints of the od split parameters the second was developed from sequential quadratic programming these algorithms showed different capabilities to capture an abrupt change in the split parameters practical recommendations of the choice of different algorithms are given
