the present work reflects a multi disciplinary effort to address the topic of confined hydrosystems developed with a cross fertilization panel of physics chemists biologists soil and earth scientists confined hydrosystems include all situations in natural settings wherein the extent of the liquid phase is limited so that the solid liquid and or liquid air interfaces may be critical to the properties of the whole system primarily this so called residual solution is occluded in pores channels in such a way that decreases its tendency to evaporation and makes it long lasting in arid earth deserts and hyper arid mars soils areas the associated physics is available from domains like capillarity adsorption and wetting and surface forces however many processes are still to understand due to the close relationship between local structure and matter properties the subtle interplay between the host and the guest the complex intermingling among static reactivity and migration pathway expert contributors from israel russia europe and us discuss the behaviour of water and aqueous solutes at different scale from the nanometric range of carbon nanotubes and nanofluidics to the regional scale of

aquifers reactive flow in sedimentary basins this scientific scope allowed the group of participants with very different background to tackle the confinement topic at different scales the book is organized according to four sections that include i flow from nano to mega scale ii ions hydration and transport iii in pores channels cavitation iv crystallization under confinement most of contributions relates to experimental works at different resolution interpreted through classic thermodynamics and intermolecular forces simulation techniques are used to explore the atomic scale of interfaces and the migration in the thinnest angstrom wide channels

this book focuses on the most recent environmentally friendly technologies such as physical treatments of heat and modified atmospheric packaging developed to reduce spoilage and maintain the quality of produce internationally recognized investigators review the latest knowledge in this field with several chapters written by the researchers who developed recent scientific breakthroughs the book details newer technologies in heat treatment that help reduce decay scalding and chilling injury other topics include the technological revolution in transportation of produce from the producing countries to the consuming countries and the growing trend of demand for fresh cut products

this book offers a rich account of how quality improvement agendas informed by neoliberalism create contradictory and complex contexts in which teachers produce different types of practices for specific purposes drawing on michel foucault s analytical tools archaeology and genealogy this book weaves together findings from classroom observations field notes and interviews to explore the dichotomies between practices focussing on day to day pedagogies and practices concerned with performance management

and accountability initiatives by attending to a Foucauldian conception of power and counter conduct it explores new means of defining quality in teaching spaces after considering existing quality assurance judgements the book illuminates the significance of moving slightly away from an institutionalised enterprise culture and loosening relations with reductionist approaches as a starting point while doing so it reworks the idea of quality by presenting other ways of looking at the complex character of pedagogical realities with new insights into an emergentist and process oriented conception of teaching practices the book argues that we need to unlearn our existing knowledge of quality that overlooks contextual constraints and opportunities enmeshed in teaching practices it questions the assumptions that the existing methods of observation are capable of quantifying the quality of education in a classroom or in a college in toto by introducing the idea of documentisation the book breaks new theoretical ground to show that this so called system of robust accountabilities is not as self evident as we believe and why we must rethink quality by unthinking our current common sense written for researchers in educational studies practising teachers and policy makers this book combines profound insights from theory and contemporary teaching practices with clear guidelines as to how educational policy making should be approached

globalization is leading the industry worldwide especially the new technology sector the main aim of the book is to enhance the reader's knowledge â especially from a multidisciplinary perspective rather than from an individual functional perspective â the role of the globalization in the evolving world of the new technologies this book will overview the process of globalization from a number of perspectives including historical geographical and social viewpoints while focusing on the new technologic products and services globalization and its effects on the innovative technology sector are best examined in terms of the social
