the present volume grew out of a double session of the boston collo quium for the philosophy of science held in boston on march 25 1983 the papers presented there by biezunski glick goldberg and judith goodstein offered both sufficient comparability to establish regulari ties in the reception of relativity and einstein s impact in france spain the united states and italy and sufficient contrast to suggest the salience of national inflections in the process the interaction among the participants and the added perspectives offered by members of the audience suggested the interest of commissioning articles for a more inclusive volume which would cover as many national cases as we could muster only general guidelines were given to the authors to treat the special or general theories or both hopefully in a multidisciplinary setting to examine the popular reception of relativity or einstein s personal impact or to survey all

these topics in a previous volume on the 2 comparative reception of darwinism one of us devised a detailed set of guidelines which in general were not followed in our opinion the studies in this collection offer greater comparability no doubt because relativity by its nature and its complexity offers a sharper more easily bounded target as in the darwinism volume this book concludes with an essay intended to draw together in comparative perspective some of many themes addressed by the participants

in this important volume major events and personalities of 20th century physics are portrayed through recollections and historiographical works of one of the most prominent figures of european science a former student of enrico fermi and a leading personality of physical research and science policy in postwar italy edoardo amaldi devoted part of his career to documenting both as witness and as historian some significant moments of 20th century science the focus of the book is on the european scene ranging from nuclear research in rome in the 1930s to particle physics at cern and includes biographies of physicists such as ettore majorana bruno touschek and fritz houtermans edoardo amaldi carpaneto 1908 roma 1989 was one of the leading figures in twentieth century italian science he was conferred his degree in physics at rome university in 1929 and played an active role as a member of the team of young physicists known as the boys of via panisperna in the fundamental research on artificial induced radioactivity and the properties of neutrons which won the group s leader enrico fermi the nobel prize for physics in 1938 following fermi s departure for the united states in 1938 and the disruption of the original group amaldi took upon himself the task of reorganising the research in physics in the difficult situation of post war italy his own research went from nuclear physics to cosmic ray physics elementary particles and in later years gravitational waves active research was for him always coupled to a direct involvement as a statesman of science and an organiser he was the leading figure in the establishment of infn national institute for nuclear physics and has played a major role as

spokesman of the italian scientific community in the creation of cern the large european laboratory for high energy physics he also actively supported the formation of a similar trans national joint venture in space science which gave birth to the european space agency in these and several other scientific organisations he was often entrusted with directive responsibilities in his later years he developed a keen interest in the history of his discipline this gave rise to a rich production of historiographic material of which a significant sample is collected in this volume
