la industria aeroespacial es la segunda actividad mas normada luego de las actividades nucleares esta regida por infinidad de normas reglamentaciones directivas documentacion especifica y todo tipo de manuales de referencia obligatoria la gran mayoria llega a manos de usuarios operadores talleristas etc en idiomaingles el idioma de uso aeronautico por naturaleza a ello se suma el hecho de que la industria aeronautica no esta aislada de las actividades humanas sino que interactua y se nutre y hace su aporte a ellas creando la necesidad de un solo lenguaje interdisciplinario ahora bien si bien conocemos la existencia de esta necesidad de creacion de un fuerte interdisciplinario tambien sabemos que en esta tarea nos encontramos con una gran barrera en el mismo la comunicacion a partir de esto es posible considerar varios impedimentos en esa barrera uno de los mas importantes es el idioma como factor concurrente esta el uso de regionalismos y como consecuencia de ellos la aplicacion de jergas especificas desde los albores de la aviacion hemos convivido con ese problema sucede que al incrementarse dia a dia el numero de operaciones al crecer el parque aeronautico y convertirse la aviacion en una necesidad para el resto de las actividades humanas las condiciones inseguras los incidentes y los accidentes continuan produciendose quedando de manifiesto las falencias de la industria en ese aspecto vi las nuevas tecnologias en materiales los nuevos metodos de diseño y los planes de mantenimiento tecnologicas de inspeccion no destructivas han reducido los riesgos latentes de fallas tecnologicas pero no todos los aspectos relacionados con la vida humana puede solucionarlos la tecnologia por lo que en paralelo con los desarrollos tecnologicos se han creado conceptos de gestion del factor humano que han contribuido en gran medida a la

seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica CRM MRM Loft Shell etc la comunicación es un vínculo importante si miramos en la seguridad operacional si trasladamos lo expuesto a las tareas diarias ya sea en la operación de una aeronave en el mantenimiento de la misma en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial se presentará el problema del uso del idioma inglés los regionalismos y las jergas específicas factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común es inevitable tanto en inglés como en español el uso de regionalismos y argot jergón en inglés por ejemplo un técnico ecuatoriano hablará de la bitácora de la aeronave mientras que un argentino hablará de la libreta histórica de la aeronave esta divergencia puede justificarse como un caso de regionalismos de países diferentes ahora bien en el segundo ejemplo el mismo técnico argentino en la provincia de Buenos Aires hablará de chavetas para frenar un bulón mientras que otro técnico argentino en Córdoba hablará de cupillas para frenar un bulón en paralelo se puede ver también que los diferentes fabricantes tienen léxicos específicos con respecto a sus productos por ejemplo uno de los más conocidos fabricantes británicos de motores posee un sistema propio de código de denominación y aplicación de boletines de servicio no mandatorios muy distinto al que manejan sus competidores directos de Estados Unidos y Canadá por eso la intención de este manual es contemplar una cantidad importante de tales divergencias presentando en cada asiento específico para que el uso del término y el concepto se apliquen con la mayor propiedad posible la propuesta de este manual es constituirse en una obra de referencia pensada como apoyo idiártico para interpretar y utilizar con mayor exactitud todos los niveles en que se presenta la terminología aeronáutica y contribuir a la aclaración de las dudas que continuamente se dan en la traducción de ambas lenguas en los diferentes campos de la aviación
