complex disorders including obesity diabetes fatty liver disease cardiovascular disease and cancer are results from a combination of genetic environmental and lifestyle factors the prevalence of such disorders has increased dramatically in the last two decades and there is an urgent need for the development of new prognostic tools for the treatment of such diseases however this requires a deep understanding of the underlying molecular mechanisms involved in the occurrence of the diseases with the advances in high throughput technologies biological components of cells can be measured with a very high resolution and these data can be used for investigating whole systems properties using a network based approach systems medicine provides an integrative platform for studying the interactions between the biological components of the cell using a holistic approach and generating mechanistic explanations for the

emergent systems properties this inter disciplinary field of study allows for understanding biological processes of cells in health and disease states gaining new insights into what drives the appearance of the disease and finally identifying proteins and metabolites implicated in human disease systems medicine utilizes mathematical approaches to generate models which can be employed for designing new sets of experiments and for mapping the response of the system to perturbations quantitatively these models as well as the developed tools can accelerate the emergence of personalized medicine which can transform the practice of medicine and offer better targets for drug development with minimum side effects

natural disasters are often multifaceted and cause severe damage disasters initiated locally can become national and even global crises today s world urgently needs a new body of knowledge and techniques for the mitigation of and response to disaster central to such a body of knowledge are disaster preparedness emergency and crisis management systems of government of which capacity building is becoming an increasingly important element in public administration management and governance today disasters are to be managed by sound local national and global governance through all the phases of preparedness prevention mitigation and then to relief recovery and re construction during all these phases government plays the most important role this book provides a case of the disaster governance of japan by presenting information and analyses on what happened in the magnitude 9 great east japan earthquake that caused the huge tsunami and the ines level 7 fukushima nuclear power plants accidents on march 11 2011 in examining this japanese case study this book illustrates the socio economic damage of the stricken areas together with the overall picture of the disasters it examines japan s capacity for disaster governance and it s crisis management system in response to the most devastating disaster that the country has ever encountered since the end of wwii it also offers preliminary findings learned from this experience in the japan s public administration and governance systems challenged to be more accountable and transparent during the recovery and reconstruction efforts now in progress

vols 2 6 of the caib s final report contain appendices that provide the supporting documentation for the main text of the final report contained in vol 1 which was released on aug 26 2003 these appendix materials were working documents they contain a number of conclusions and proposed recommendations several of which were adopted by the caib in vol 1 the other conclusions and proposed recommendations drawn in vols 2 6 do not necessarily reflect the views of the caib but are included for the record when there is conflict vol 1 takes precedence it alone is the caib s official statement
