introduction to psychological science provides students with an accessible comprehensive and engaging overview of the field of scientific psychology it expertly incorporates a variety of perspectives ranging from neuroscience to cultural perspectives at an introductory level ray brings together cutting edge research from traditional psychological literature to modern evolving perspectives and creates a unified approach by focusing on three core themes behavior

and experience an analysis of behavior and experiences observed across a variety of everyday life situations neuroscience an examination of psychological experiences through neuroscience lens ranging from genetic epigenetic to cortical networks as related to psychology evolutionary human origins an exploration of broader scientific questions by examining psychological processes from the perspective of human and cultural history through these themes the book delves into topics like social processes psychopathology stress and health motivation and emotion developmental sequences and cognitive functions such as memory learning problem solving and language throughout it helps students to understand the nature of psychological science by addressing common myths and misconceptions in psychology showing how psychological science can be applied to everyday life and how new research can be created additionally this student friendly book is packed with pedagogical features including concept checks to test reader knowledge extensions features which show how to apply knowledge and a comprehensive glossary reflecting the latest apa guidelines concerning the essential elements of an introductory psychology course this text is core reading for all undergraduate introductory psychology students

psychological science under scrutiny explores a range of contemporary challenges to the assumptions and methodologies of psychology in order to encourage debate and ground the discipline in solid science discusses the pointed challenges posed by critics to the field of psychological research which have given pause to psychological researchers across a broad spectrum of sub fields argues that those conducting psychological research need to fundamentally change the way they think about data and results in order to ensure that psychology has a firm basis in empirical science places the recent challenges discussed into a broad historical and conceptual perspective and considers their implications for the future of psychological methodology and research challenges discussed include confirmation bias the effects of grant pressure false positive findings overestimating the efficacy of medications and high correlations in functional brain imaging chapters are authored by internationally recognized experts in their fields and are written with a minimum of specialized terminology to ensure accessibility to students and lay readers

this book is about explanation and experiment in a science of human action it aims to provide a philosophy of social psychological science that both embodies sound principles of scientific reasoning and is sensitive to the social psychological dimensions of human action the guiding principle of this book is the belief that the logical forms of causal explanation and experimental evaluation can be effectively employed in the scientific analysis of meaningful human action according to most accounts social psychological science has been in a more or less constant state of crisis for the past decades having been subject to a host of criticisms on moral political methodological and philosophical grounds many of these critiques have been directed against the still dominant conception of social psychological enquiry as a causal and objective scientific discipline that is closely analogous to if not to be identified as a branch of the natural sciences thus many of the most vigorous debates have concerned the nature of explanation and the utility of experimentation in a

social psychological discipline

presents key topics with an emphasis on experimental research and logic students will learn the importance of developing testable hypotheses how to evaluate new information critically and the impact of research on ourselves and our society

this book explores the development of ideas in psychology's past it is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline's future scientists in general are known to ignore their own history considering it to be a graveyard of failures in thinking in psychological science selected ideas of key figures in the cognitive comparative and developmental sides of psychology karl duncker karl biihler tamara dembo zing young kuo c lloyd morgan alexander chamberlain and arnold gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies yet the reality is just the opposite science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity this book analyzes the processes involved in the search for solutions to major theoretical problems of development kuo gesell action and cognition biihler bunker dembo and methodology morgan ultimately this is an exciting volume that reveals real science in the making thinking in psychological science will be of interest to students of the social sciences and intellectual history it is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science

psychological clinical science offers readers insightful appraisals of the most current theory and research in psychopathology and evidence based intervention it honors richard mcfall of indiana university a visionary psychological clinical scientist widely recognized for his unwavering advocacy for a science of clinical psychology and for the integration of clinical psychology with other subdisciplines of psychological science with the publication of this volume psychology press and the association for psychological science are launching jointly a series of festschrifts that honor the careers and contributions of distinguished psychological scientists in keeping with mcfall's integrative approach to psychological science contributors to this volume include prominent clinical scientists cognitive scientists and neuroscientists the book details the historical and epistemological underpinnings of psychological clinical science addresses topics of applied significance offers an overview of several model research programs and suggests future directions in clinical science research application and training an accompanying dvd contains an interview with mcfall on his career and the clinical science movement which provides an inspiring and fascinating glimpse of his perspective on the past present and future of psychological clinical science

giambattista vico 1668 1744 was an italian philosopher rhetorician and historian as one of the great thinkers of the enlightenment he exerted tremendous influence on the social sciences he was the first to stress cultural and linguistic dimensions in the development of both the human mind and social institutions although his ideas on the relationship between mind and culture and his epistemology have inspired the work of many scholars in psychology his sizeable influence has been scarcely acknowledged the volume is organized in two sections the first locates vico in his historical context and in the landscape of contemporary human and social sciences the second part presents those of vico s concepts that seem promising for the development of a new way of looking at psychological phenomena in the book s conclusion luca tateo gathers the ideas of the volume s contributors to suggest future development of the psychological sciences this book aims to show how vico s insights can inspire future research in the psychological sciences it collects multidisciplinary contributions of leading international scholars that draw upon the thought of this original thinker collectively the contributors remind us of the legacy and continuing influence of this inspiring historical figure

the computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied evolutionary psychology ep is the application of evolutionary theory to understanding human behaviour and cognition unlike other core psychology topic areas such as personality learning or developmental psychology however ep is not defined by the subset of psychological phenomena it seeks to describe and understand it is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological phenomena the central question posed by this volume is whether this over arching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior
