of new content building on the success of the previous edition all the original exercises have been revised and new ones added with the format changing to allow the inclusion of more supplementary material the aim remains the same to help pre or early course architecture students begin and develop their ability to think as architects learning to do architecture is tricky it involves awakening abilities that remain dormant in most people it is like learning language for the first time a task made more mystifying by the fact that architecture deals not in words but in places places to stand to walk to sit to hide to sleep to cook to eat to work to play to worship this book was written for those who want to be architects it suggests a basis for early experiences in a school of architecture but it could also be used in secondary schools and colleges or as self directed preparation for students in the months before entering professional education exercises in architecture builds on and supplements the methodology for architectural analysis presented in the author's previous book *Analysing Architecture: The Universal Language of Place Making* fifth edition 2021 and demonstrated in his *Twenty Five Buildings Every Architect Should Understand* routledge 2015 together the three books deal with the three aspects of learning any creative discipline 1 *Analysing Architecture* provides a methodology for analysis that develops an understanding of the way architecture works 2 *Twenty Five Buildings* explores and extends that methodology through analysis of examples as case studies and 3 *Exercises in Architecture* offers a way of expanding understanding and developing fluency by following a range of rudimentary and more sophisticated exercises those who wish to become professional architects wherever in the world they might be must make a conscious effort to learn the universal language of architecture as place making to explore its powers and how they might be used the exercises in this book are designed to help

the underlying theme of *Twenty Five Buildings Every Architect Should Understand* is the relationship of architecture to the human being how it frames our lives and orchestrates our experience how it can help us make sense of the world and contribute to our sense of identity and place exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty first century architecture this book is essential reading for every architect with the addition of numerous shorter analyses this new edition covers an even greater range of architectural ideas providing students and architects with further inspiration for exploration in their own design work architects live by ideas but where do they come from and how do they shape buildings there is no one right way to do architecture this book illustrates many its aim is to explore the rich diversity of architectural creativity by analysing a wide range of examples to extract the ideas behind them *Twenty Five*

have you ever wondered how the ideas behind the world s greatest architectural designs came about what process does an architect go through to design buildings which become world renowned for their excellence this book reveals the secrets behind these buildings he asks you to read the building and understand its starting point by analyzing its final form through the gradual revelations made by an understanding of the thinking behind the form you learn a unique methodology which can be used every time you look at any building

each of these analysing architecture notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture they can be thought of as addenda to the foundation volume analysing architecture which first appeared in 1997 and has subsequently been enlarged in three further editions examining these extra themes as a series of notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy as children we make places spontaneously on the beach in woodland around our homes those places are evidence of a natural language of architecture we all share beginning with the child as seed and agent of the places it makes initial sections of children as place makers illustrate the key verbs that drive that natural language of architecture later sections

look at the core importance of the circle of place how as children we are drawn to inhabit boxes and the narrative possibilities that arise when place is linked with imagination the principal messages of this notebook are that it is by place making we make sense of the space of the world in which we live and that the first step in becoming a professional architect is to re awaken the innate architect inside each of us

each of these analysing architecture notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture they can be thought of as addenda to the foundation volume analysing architecture which first appeared in 1997 and has subsequently been enlarged in three further editions examining these extra themes as a series of notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy curve is a divisive issue in architecture some see curves as expensive and decadent others as an expression of transcendence a way that the human mind can express its freedom from quotidian constraints yet others use curves to emulate some of the most beautiful forms in nature this notebook considers the various authorities to which architects look for the generation of their curves it also considers the aspirations curves manifest in architectural form

even the most inventive and revolutionary architects of today owe debts to the past often to the distant past when architecture really was being invented for the first time architects depend on their own imaginations for personal insights and originality but their ideas may be stimulated consciously or subliminally by particularly powerful buildings from history the ten most influential buildings in history architecture s archetypes identifies ten architectural archetypes that have been sources of inspiration for architects through the centuries each archetype is analysed through distinctive examples following the methodology established by the author in his previous books the variety of lines of enquiry each archetype has provoked in latter day architects are then explored by analysing their work to reveal ideas inspired by those earlier buildings archetypes have a timeless relevance in adopting this approach the ten most influential buildings in history is as pertinent to contemporary practice as it is to understanding buildings from antiquity and offers insights into the bridges of influence that can operate between the two

illustrated with numerous drawings and photographs doorway is a stimulus to thinking about what can be done with architecture the notebook style offers an example to

student architects of how they might keep their own architecture notebooks

each of these analysing architecture notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture they can be thought of as addenda to the foundation volume *analysing architecture* which first appeared in 1997 and has subsequently been enlarged in three further editions examining these extra themes as a series of notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy shadows may be insubstantial but they are nevertheless an important element in architecture in prehistoric times we sought shade as a refuge from the hot sun and chilling rain through history architects have used shadows to draw to mould form to paint pictures to orchestrate atmosphere to indicate the passing of time as well as to identify place sometimes shadow can be the substance of architecture

each of these analysing architecture notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture they can be thought of as addenda to the foundation volume *analysing architecture* which first appeared in 1997 and has subsequently been enlarged in three further editions examining these extra themes as a series of notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy metaphor is the most powerful component of the poetry of architecture it has been a significant factor in architecture since the earliest periods of human history when people were finding ways to give order and meaning to the world in which we live it is arguable that architecture began with the realisation of metaphor in physical form and that subsequent movements from greek to gothic renaissance to modern victorian to vernacular have all been driven by the emergence or rediscovery of different metaphors by which architecture might be generated

this volume aims to bring the issues of the everyday into the realm of architecture instead of concentrating on the extraordinary the monumental or the iconic this volume has its basis in the lived experience of buildings as they are practised by everybody
