this is a unique type of book at least i have never encountered a book of this kind the best description of it i can give is that it is a mystery novel developing on three levels and imbued with both educational and philosophical moral issues if this summary description does not help understanding the particular character and allure of the book possibly a more detailed explanation will be found useful one of the primary goals of the author is to interest readers in particular young mathematicians or possibly pre mathematicians in the fascinating world of elegant and easily understandable problems for which no particular mathematical knowledge is necessary but which are very far from being easily solved in fact the prototype of such problems is the following if each point of the plane is to be given a color how many colors do we need if every two points at unit distance are to receive distinct colors more than half a century ago it was established that the least number of colors needed for such a coloring is either 4 or 5 or 6 or 7 well which is it despite efforts by a legion of very bright people many of whom developed whole branches of mathematics and solved problems that seemed much harder not a single advance towards the answer has been made this mystery and scores of other similarly simple questions form one level of mysteries explored in doing this the author presents a whole lot of attractive results in an engaging way and with increasing level of depth
