this is a practical book exploring how to conduct animal assisted intervention aai in ways that protect and prioritize animal and human welfare this resource is for social

scientists e.g. psychology, social work, human development and family studies etc. as well as ethologists and animal behaviour and welfare students and practitioners. The book is a series of short chapters that depict a wide array of AATs and their potential welfare concerns. The chapters include descriptions of the AATs offered, the welfare challenges and ways to successfully mitigate these challenges. This book also covers critical topics including therapy animals, aging, retirement and death, as well as ethical issues including animal consent. Species include not only dogs but horses, rabbits and other small animals e.g. guinea pigs, mice etc. Types of AATs involve individual interventions as well as crisis dogs, those who help after natural and man-made disasters, and residential animals. The book is designed to be a practical, engaging book with links to video and examples of real-life situations. It is evidence-based yet user-friendly and directly applicable to students and practitioners. An invaluable resource for ethologists and animal behaviour and welfare students and practitioners as well as social scientists e.g. psychology, social work, human development and family studies.

The beneficial effect of animals on humans has been known for centuries. It is only recently, however, that more scientific studies have been set up to assess the 'furry factor'. We now know that people are statistically less likely to suffer an early heart attack if they have a pet and that stroking an animal actually reduces stress levels. Projects like guide dogs for the blind and riding for the disabled are also familiar to many and are recognised as doing sterling work. But this is only the tip of the iceberg. Animal-assisted therapy, as it is known, is going from strength to strength and gaining recognition from mainstream medicine. There is a burgeoning amount of research being put into the extraordinary effect dolphins can have on children with a range of physical and mental impairments. Numerous animal schemes have been set up, including one where dogs have been trained to help disabled people with household tasks. Cats and dogs, even rabbits, are taken into hospitals to offer comfort and be cuddled by patients. People with severe epilepsy can lead near-normal lives with dogs who possess the intriguing ability to predict a major seizure. Written with warmth and humour, but above all compassion, *Creature Comfort* looks at all aspects of animal-assisted therapy, including the theories behind it, to provide both a practical guide and emotional journal. A must for pet-lovers, health-care workers and those who wish to benefit from this most holistic of therapies.

The original edition was the first book to provide a comprehensive overview of the ways in which animals can assist therapists with treatment of specific populations and/or in specific settings. The second edition continues in this vein with 7 new chapters plus substantial revisions of continuing chapters, as the research in this field has grown. New coverage includes animals as social supports, use of AAT with special

needs students the role of animals in the family insights for clinicians and measuring the animal person bond contributions from veterinarians animal trainers psychologists and social workers includes guidelines and best practices for using animals as therapeutic companions addresses specific types of patients and environmental situations
