Introduction by Salvatore Engel di Mauro; Foreword by Ariel Salleh. This book takes as its object of critique one of the best known and most influential arguments in contemporary applied ethics, which is biologist Garrett Hardin's case for lifeboat ethics. John Clark analyzes the moral dimensions of world hunger, foreign aid, immigration policy, and population growth. Clark critiques the lifeboat ethics as a way to explore in depth both the common and the commons. It is about the truth we hold in common and about certain falsehoods that we hold in common. This book also contains Garrett Hardin's 1974 essay "Living on a Lifeboat."

During recent decades, the global climate and environment have experienced unprecedented changes. Much evidence indicates that the global surface temperature is increasing rapidly, especially in the Arctic and extreme climate and environmental events are frequently occurring. Climate and environmental changes not only have a great impact on society and the economy but also seriously exert far-reaching impacts on both human lives and health. Therefore, revealing the mechanisms behind the climate and environmental changes is critical to advancing our understanding and predicting of the global climate and environmental changes and their impacts. Climate change can cause environmental change, and environmental change may in turn affect climate change. For example, the faster Arctic warming can change the mid-latitude large-scale atmospheric circulation and further modulate the regional air quality through transport and diffusion. Conversely, the air pollution associated with industrial activities may also affect the regional and global climate through the complicated aerosol-climate interaction. The limited understanding of these feedback and interactions adds uncertainty to predicting the future evolution of the climate and environment.
