this book details the latest research and development in the use of magnetic resonance imaging and spectroscopy as tools to give quantitative insights concerning late stage pharmaceutical

formulation tablet manufacturing and drug dissolution behaviour the book combines different facets of magnetic resonance and highlights the use of spatial resolution mri and how this adds to the knowledge base to further our understanding of the microscopic physicochemical processes occurring during drug release from solid dosage forms new topics that have not been thoroughly reviewed elsewhere are covered including the applications of solution state magnetic resonance in process scale up reaction monitoring understanding and process analytical technologies pat dissolution testing and counterfeit analysis solid state nmr and its role in understanding phase separation in dispersions polymorphism and crystallography are included and magnetic resonance imaging and its use in assessing tablet dissolution performance mass transport and mixing in hot melt extrusion hme are covered focusing on late stage development rather than molecular drug discovery provides a unique approach and the book will appeal to a diversity of disciplines using spectroscopy for study aimed at researchers in drug development manufacture and formulation in both industry pharmaceutical companies and academia pharmacy program it includes examples where appropriate of studies on commercially available pharmaceutical products

the field of electrochemistry is exploring beyond its basic principles to innovation new technologies for electrochemical applications presents advancements in electrochemical processes materials and technology for electrochemical power sources such as batteries supercapacitors fuel cells hydrogen storage and solar cells it also examines various environmental applications such as photo electrochemistry photosynthesis and coating organized to give readers an overview of the current field in electrochemical applications this book features a historical timeline of advancements and chapters devoted to the topics of organic material and conducting polymers for electrochemical purposes established experts in the field detail state of the art materials in biosensors immunosensors and electrochemical dna this edited reference is a valuable resource for graduate and post graduate students and researchers in disciplines such as chemistry physics electrical engineering and materials science
