only human beings have a rich conceptual repertoire with concepts like tort entropy abelian group mannerism icon and deconstruction how have humans constructed these concepts and once they have been constructed by adults how do children acquire them while primarily focusing on the second question in the

origin of concepts susan carey shows that the answers to both overlap substantially carey begins by characterizing the innate starting point for conceptual development namely systems of core cognition representations of core cognition are the output of dedicated input analyzers as with perceptual representations but these core representations differ from perceptual representations in having more abstract contents and richer functional roles carey argues that the key to understanding cognitive development lies in recognizing conceptual discontinuities in which new representational systems emerge that have more expressive power than core cognition and are also incommensurate with core cognition and other earlier representational systems finally carey fleshes out quinian bootstrapping a learning mechanism that has been repeatedly sketched in the literature on the history and philosophy of science she demonstrates that quinian bootstrapping is a major mechanism in the construction of new representational resources over the course of childrens cognitive development carey shows how developmental cognitive science resolves aspects of long standing philosophical debates about the existence nature content and format of innate knowledge she also shows that understanding the processes of conceptual development in children illuminates the historical process by which concepts are constructed and transforms the way we think about philosophical problems about the nature of concepts and the relations between language and thought

the nature of concepts examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept an excellent cross disciplinary collection with contributors including steven pinker andy clarke and henry plotkin

the essays compiled in this volume written by distinguished experts present a broad panorama of the most important methodological challenges faced by conceptual history today as well as some more specific contributions regarding the temporal dimension of certain modern concepts at a moment when time and concepts and political concepts in particular are no longer obvious and taken for granted but have themselves become historical matter this book does not limit itself to an updating of the state of the art it also offers very useful lessons for the development of future research into this field

in doing without concepts edouard machery argues that the dominant psychological theories of concept fail to provide a coherent framework to organize our extensive empirical knowledge about concepts machery proposes that to develop such a framework drastic conceptual changes are required
