york explores the archaeology art architecture and cultural heritage of the city in the late
middle ages in the years since the resurrection of the british archaeological association

conference in 1976 the association has met in the city only once in 1988 for a conference that celebrated yorkshire monasticism as a consequence the secular and vernacular architecture as well as the architecture art and imagery of york minster were excluded from its scope something redressed in the meeting that took place in 2017 as many recent publications have focused on york in the earlier medieval period this book shines a much needed light on the city in the later medieval ages starting with a range of essays on york minster by authors directly involved in major conservation projects undertaken in the last ten years the book also includes information on the vernacular architecture and transport infrastructure of york as well as the parochial and material culture of the period illuminating the extensive resources for the study of the late middle ages in england s second capital this book provides new research on this important city and will be suitable for researchers in medieval archaeology art history literature and material culture

this book both articulates and responds to increasing scholarly interest in the materiality of the book taking as its base the unique collection of mathematical books in the russell library at maynooth it addresses questions related to printing techniques and print culture book production provenance and reading practices it considers the histories of individual items of the russell collection their previous locations and owners and explores ways in which annotations underlinings hand drawn diagrams and the like reveal patterns of reading and usage finally it seeks to elicit more information on a previously under researched topic the historical role of mathematics in the extensive network of irish colleges that once covered catholic europe located in places such as salamanca rome douai and prague alongside delivering important new insights into print culture as a medium for transmitting scientific ideas mathematical book histories is thus also intended to contribute to a broader understanding of the role and significance of mathematics in the context of clerical instruction and more broadly in the academic tradition of ireland up to the beginning of the twentieth century many of the volumes in the russell library reflect the remarkably rich book trade that flourished in seventeenth and early eighteenth century dublin and which was quite distinct from that in london booksellers often bought in their wares directly from abroad with the result that publications could enter collections that did not enter the purview of contemporary english or scottish scholars in britain

it has become increasingly clear that numbers is the litmus test for new ideas relating to the formation of the pentateuch at the same time the profusion of ideas has only resulted in a corresponding lack of agreement between scholars in the present study jordan davis grants significant attention to the geographical references found at the end of the book of numbers combining archaeological historical and literary critical insights in the attempt to arrive at more verifiable results with a detailed view at the transjordan conquest traditions num 21 21 35 32 deut 2 24 3 20 and the twin legal narratives relating to zelophehad s daughters num 27 36 the author argues for the historical catalysts underlying these traditions and then points to the ideological motivation behind their redactional expansion
