if you're a librarian charged with collecting curriculum materials and children's literature to support the common core state standards then this book the only one that offers explicit advice on collection development in curriculum collections is for you while there are many publications on the common core for school librarians and k 12 educators no such literature exists for curriculum librarians at the post secondary level this book fills that gap standing alone as a guide to collection development for curriculum librarians independent of the common core state standards ccss the book provides instruction and guidance to curriculum librarians who acquire and manage collections so you can develop a collection based on best practices the book begins with a primer on the ccss and how curriculum librarians can support them discussion of the standards is then woven through chapters arranged by content area that share research based practices in curriculum development and instruction to guide you in curriculum selection material types covered include games textbooks children's literature primary sources counseling and nonfiction additional chapters cover the management of curriculum collections testing collections and instruction and reference as well as how to support and collect for special needs learners current practices in collection development for curriculum materials librarians are also reviewed the book closes with a discussion of the future of curriculum materials

educational reforms and standards have been a topic of public debate for decades with the latest go round being the state common core curriculum standards but time and again those reforms have failed and each set of standards no matter how new and different has had little impact on improving student achievement why the textbooks textbooks sell based on design and superficial

features not because they are based on the latest research on how children learn and how well they promote student achievement in tyranny of the textbook beverlee jobrack retired from educational publishing sheds light on why this happens she gives an engaging and fascinating look behind the scenes of how k 12 textbooks are developed written adopted and sold and perhaps most importantly she clearly spells out how the system can change so that reforms and standards have a shot at finally being effective did you know reform efforts have focused on writing and rewriting standards and tests but these rarely have any effect on the core curriculum that is published school districts and states don t use effectiveness as a criterion for evaluating and purchasing textbooks publishers don t offer textbooks with better content or the latest teaching methods because teachers don t want textbooks that require them to change their practices teachers report that they don t rely on a textbook in their class but research shows that they do three companies publish 75 percent of the k 12 educational materials those three companies are producing similar programs with the same instructional strategies none of which require teachers to change their practices significantly publishers write textbooks for california and texas all of the other markets have to make do with books only superficially adjusted for their states

dr shoecraft may be the only mathematician since the new math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it his breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains by teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually all children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music when children understand arithmetic they own it it s no lonver just their teacher s math it s their math america s children are being held back in math because of how arithmetic is drug out in elementary school virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade the reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized research shows that the human brain is not designed to remember things learned by rote when no longer practiced that s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we

use and forget what we don't you know that to be true if you've ever forgotten things you once knew as well as your own name things like an old address or a license plate number every child can understand base ten numeration when taught hands on with arithmetic blocks thereby every child can understand base ten arithmetic and every child can learn how to count out the number facts like 5 7 12 17 8 9 6 x 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong what matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

understanding the knowledge that teachers must bring to their classrooms is critical to the advancement of the field of teacher education understanding how teacher knowledge impacts various aspects of teacher practice is also critical understanding the interplay between teacher knowledge and practice and consequently the result that this relationship has on student learning is most important this dissertation attempts to advance our collective understanding of the complex relationship between teacher knowledge teacher practice and student learning in the field of elementary mathematics four third grade teachers were followed as they taught a subset of lessons in a unit on fractions the study first investigates the types of knowledge that the teachers brought to their classrooms then an examination is conducted of the way in which these types of knowledge impacted their teaching practice finally the student learning that resulted over the course of these lessons is discussed this study supports the widespread belief that teacher knowledge is important to instruction the descriptions of the case study teachers highlight that their varying levels of knowledge resulted in unique aspects of practice being emphasized in their classrooms this dissertation documents the differences in teaching practice and the trade offs that produce differences in student learning interesting student learning patterns emerged based on qualitative student interviews medium students from classrooms in which teachers focused for more sustained periods on mathematical concepts seemed to demonstrate greater procedural fluency and deeper conceptual understanding than their peers in the other classrooms low students in classrooms where fluency was the focus seemed to show slightly greater procedural fluency though less conceptual understanding than their peers in the classrooms that spent more time on concepts high students showed no appreciable difference across all classrooms this study adds to the field by introducing a new construct the conceptual threshold to offer an explanation of these student learning trends

advances in child development and behavior volume 63 highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors contains chapters that highlight some of the most recent research in the areas of child development and behavior presents a high quality and wide range of topics covered by well known professionals

this book collects recent research on posing and solving mathematical problems rather than treating these two crucial aspects of school mathematics as separate areas of study the authors approach them as a unit where both areas are measured on equal grounds in relation to each other the contributors are from a vast variety of countries and with a wide range of experience it includes the work from many of the leading researchers in the area and an important number of young researchers the book is divided in three parts one directed to new research perspectives and the other two directed to teachers and students respectively
