The radioactivity in the environment series addresses the key aspects of this socially important and complex interdisciplinary subject presented objectively and with the ultimate authority gained from the many contributions by the world's leading experts. The negative and positive consequences of having a radioactive world around us is documented and given perspective in a world in which nuclear science is not only less popular than in the past but also less extensively taught in universities and colleges. This book series will fill a significant educational gap. Radioactivity in the terrestrial environment presents an updated and critical review of designing siting constructing and demonstrating the safety and environmental impact of deep repositories for radioactive wastes. It is structured to provide a broad perspective of this multi-faceted multi-disciplinary topic providing enough detail for a non-specialist to understand the fundamental principles involved. It contains extensive references to sources of more detailed information provides a detailed summary of radioactivity in terrestrial ecosystems providing a substantial and essential reference on the subject. It discusses lesser known sources of radiation exposure that provide useful information for those seeking to place environmental radioactivity into perspective.

Nuclear new build provides major opportunities for the nuclear supply chain and skilled workforce. The scale of the new build ambitions coupled with increasing demand throughout the nuclear fuel cycle and high average age of the existing qualified and experienced workforce has heightened concerns of further skills gaps. One of the key skills gaps relates to the field of radiological protection in particular modelling and measuring doses accrued by the public under both normal

operational discharges and accident scenarios this book is an essential introduction to basic principles of radiation protection and aerosol physics also discussed are the specific difficulties with the monitoring and the health detriment associated with the more mobile and problematic radionuclides prové de l editor
