the use of liquid o2 in space vehicles depends upon utilizing a converter that can maintain control of operating pressure and delivery rate under varying gravitational fields including zero gravity msar proposes a new converter design that includes an automatically controlled mechanical heat valve for controlling the internal pressure of the flask the design includes an internal control valve and heat transfer coil to prevent excessive boil off during standby conditions msar built and tested a prototype zero gravity flask incorporating these features performance tests showed the heat valve would be effective for controlling heat flow to the flask under various attitudes and gravitational forces the internal valves leaked across the seat preventing complete shut off better design and fabrication techniques should make this valve suitable for both high outgassing and low operating temperatures the tests showed the design concepts to be a promising approach for controlling liquid oxygen under zero gravity conditions

today s digital world has a language all its own digital information management a survival guide to digital multimedia is designed to help college students educators and professionals learn how to communicate their ideas using the basic elements of digital media devoting a chapter to each tool it skillfully introduces multimedia components such as text graphics audio animation and video it discusses both the legal issues surrounding intellectual property and also how to combine various digital elements for maximum impact accompanied by an application software cd rom this book provides the tools needed to express thoughts and ideas effectively in today s digital world
