Ap Stats Quiz B Chapter 14 Answers AP Stats Quiz B Chapter 14 Answers This document provides comprehensive answers to a hypothetical AP Statistics Quiz B for Chapter 14 focusing on inference for categorical data. It will cover the following topics:

- 1 Understanding Proportions Confidence Intervals Question 1 Identifying the correct conditions for constructing a confidence interval for a population proportion.
- 2 Calculating a confidence interval for a population proportion and interpreting the results.
- 3 Explaining the meaning of a confidence level and the margin of error.
- 2 Hypothesis Testing for Proportions Question 4 Formulating appropriate null and alternative hypotheses for a onesample proportion test.
- Question 5 Performing a hypothesis test for a population proportion including calculating the test statistic and pvalue.
- Question 6 Interpreting the results of a hypothesis test and drawing a conclusion about the population proportion.
- 3 TwoSample Proportions Question 7 Identifying the conditions for performing a twosample proportion test.
- Question 8 Calculating a confidence interval for the difference in two population proportions.
- Question 9 Performing a hypothesis test for the difference in two population proportions.
- 4 ChiSquare Test for Goodness of Fit Question 10 Identifying the conditions for performing a chisquare goodnessoffit test.
- Question 11 Performing a chisquare goodnessoffit test calculating the expected counts and interpreting the results.
- 5 ChiSquare Test for Independence Question 12 Identifying the conditions for performing a chisquare test for independence.
- Question 13 Performing a chisquare test for independence calculating the expected counts and interpreting the results.

Answers:

- Question 1 Scenario A researcher wants to estimate the proportion of adults in the US who believe in climate change. They randomly sample 1000 adults and find that 720 believe in climate change. Which of the following conditions must be met to construct a confidence interval for the population proportion of adults in the US who believe in climate change?
  - The sample size must be less than 10 of the population size.
  - The sample must be a simple random sample.
  - The number of successes and failures in the sample must both be at least 10.
  - Both A and B.
  - Both B and C.
- Answer E Both B and C Explanation B Simple random sample. This ensures the sample is representative of the population. C Successes and failures. This ensures the sampling distribution of the sample proportion is approximately normal.
- Question 2 Scenario In a survey of 250 randomly selected college students 180 reported that they regularly use social media. Calculate a 95 confidence interval for the proportion of all college students who regularly use social media.
- Answer 1 Sample proportion phat 180/250 072 2 Standard error SE sqrt(072 \* 028/250) 0028 3 Margin of error ME 196 \* 0028 0055 4 Confidence interval 072 ± 0055 0665 0775 Interpretation We are 95 confident that the true proportion of all college students who regularly use social media is between 665 and 775.
- Question 3 Question Explain the meaning of a 90 confidence level and the margin of error in the context of a confidence interval for a population proportion.
- Answer 3 Confidence level A 90 confidence level means that if we were to repeat this process of constructing confidence intervals many times we would expect 90 of those intervals to contain the true population proportion. Margin of error The margin of error represents the maximum likely difference between the sample proportion and the true population proportion. In other words it gives us a range of plausible values for the population proportion.
- Question 4 Scenario A company claims that at least 80 of its customers are satisfied with its products. A consumer advocacy group wants to test this claim.
- Question Formulate the null and alternative hypotheses for a hypothesis test to determine if the companys claim is accurate.
- Answer Null hypothesis  $H_0: p \geq 0.80$ . The proportion of satisfied customers is at least 80. Alternative hypothesis  $H_a: p < 0.80$ . More than 50 of voters support the candidate.
- 2 Test statistic  $z = \frac{0.525 - 0.50}{\sqrt{0.50 * 0.50 / 100}} = 2.00$
- 3 Pvalue  $P(z > 2.00) = 0.1587$
- 4 Decision Since the pvalue 0.1587 is greater than the significance level 0.05 we fail to reject the null hypothesis.
- 5 Conclusion There is not enough evidence to conclude that a majority of voters in the district support the candidate.
- Question 6 Scenario A study found that 15 of children under the age of 5 have a peanut allergy. A new treatment for peanut allergies is being tested. In a clinical trial of 100 children with peanut allergies 80 of them showed improvement after taking the new treatment.
- Question Interpret the results of a hypothesis test for the proportion of children who show improvement after taking the new treatment assuming a pvalue of 0.02.
- Answer The pvalue

of 002 indicates that if the new treatment has no effect ie the proportion of children showing improvement remains at 15 there is only a 2 chance of observing 80 or more improvement in a sample of 100 children Since the pvalue is less than the significance level of 005 we reject the null hypothesis Conclusion There is strong evidence to suggest that the new treatment is effective in improving peanut allergies in children Question 7 Scenario A company wants to compare the effectiveness of two different marketing campaigns They randomly assign 100 customers to each campaign and track the proportion of customers who make a purchase Question Which of the following conditions must be met to perform a twosample proportion test to compare the effectiveness of the two campaigns A The samples must be independent B The number of successes and failures in each sample must be at least 10 C The population sizes must be at least 10 times the sample sizes D Both A and B E Both A and C Answer D Both A and B Explanation A Independent samples This ensures that the results of one campaign do not influence the results of the other B Successes and failures This ensures the sampling distributions of the sample proportions are approximately normal Question 8 5 Scenario A study of two different types of diet plans for weight loss was conducted Plan A resulted in weight loss for 60 of the participants while Plan B resulted in weight loss for 75 of the participants The sample sizes for Plan A and Plan B were 120 and 100 respectively Question Calculate a 90 confidence interval for the difference in the proportions of participants who lost weight on the two diet plans Answer 1 Sample proportions  $p_1 = 0.60$   $p_2 = 0.75$  2 Standard error SE  $\sqrt{0.60 \cdot 0.40 / 120 + 0.75 \cdot 0.25 / 100} = 0.064$  3 Margin of error ME  $1.645 \cdot 0.064 = 0.105$  4 Confidence interval  $0.75 - 0.60 = 0.15$   $0.15 \pm 0.105$   $0.045 \text{ to } 0.255$  Interpretation We are 90 confident that the true difference in the proportions of participants who lost weight on the two diet plans is between 45 and 255 Question 9 Scenario A survey of 200 college students found that 60 of those who lived on campus were satisfied with their housing while 70 of those who lived off campus were satisfied with their housing Question Perform a hypothesis test to determine if there is a significant difference in the satisfaction levels of students living on campus and off campus Use a significance level of 001 Answer 1 Hypotheses  $H_0: p_1 = p_2$  There is no difference in satisfaction levels  $H_a: p_1 \neq p_2$  There is a difference in satisfaction levels 2 Test statistic  $z = \frac{0.60 - 0.70}{\sqrt{0.65 \cdot 0.35 / 200}} = -2.00$  3 Pvalue  $P(z \geq 2.00) = 0.0455$  4 Decision Since the pvalue 00455 is greater than the significance level 001 we fail to reject the null hypothesis 5 Conclusion There is not enough evidence to conclude that there is a significant difference in satisfaction levels between students living on campus and off campus Question 10 Scenario A researcher wants to investigate whether the distribution of political affiliations in 6 a particular city is different from the national distribution The national distribution is as follows 30 Democrat 25 Republican 15 Independent and 30 Other The researcher surveys 500 residents and finds the following results 150 Democrats 120 Republicans 80 Independents and 150 Others Question Which of the following conditions must be met to perform a chisquare goodness offit test to determine if the distribution of political affiliations in the city is different from the national distribution A The expected counts for each category must be at least 5 B The sample size must be large enough C The data must be categorical D Both A and B E Both A and C Answer E Both A and C Explanation A Expected counts This ensures that the chisquare distribution provides an accurate approximation to the sampling distribution of the test statistic C Categorical data The chisquare goodnessoffit test is used to compare observed frequencies with expected frequencies for categorical data Question 11 Scenario A die is rolled 60 times and the following results are observed Face Observed Count Expected Count 1 12 10 2 9 10 3 11 10 4 10 10 5 8 10 6 10 10 10 Question Perform a chisquare goodnessoffit test to determine if the die is fair Use a significance level of 005 Answer 1 Hypotheses 7  $H_0$  The die is fair all faces have equal probability  $H_a$  The die is not fair at least one face has a different probability 2 Test statistic Calculate the chisquare statistic using the formula  $\chi^2 = \sum \frac{(O - E)^2}{E}$  Observed Count Expected Count 12 10 10 9 10 10 11 10 10 10 8 10 10 10 10 10 0.8 3 Degrees of freedom df number of categories 1 6 1 5 4 Pvalue  $P(0.87) = 0.97$  with df 5 097 using a chisquare table or calculator 5 Decision Since the pvalue 097 is greater than the significance level 005 we fail to reject the null hypothesis 6 Conclusion There is not enough evidence to conclude that the die is not fair Question 12 Scenario A researcher wants to investigate if there is a relationship between gender and preference for a particular type of movie They survey 100 people and find the following results Action Comedy Male 30 20 Female 20 30 Question Which of the following conditions must be met to perform a chisquare test for independence to determine if there is a relationship between gender and movie preference A The expected counts for each cell in the table must be at least 5 B The sample size must be large enough C The data must be categorical D Both A and B E Both A and C Answer E Both A and C Explanation A Expected counts

This ensures the chisquare distribution provides an accurate approximation to the sampling distribution of the test statistic C Categorical data The chisquare test for independence is used to examine the association between two categorical variables 8 Question 13 Scenario A study of 150 randomly selected students found the following relationship between class standing and opinion on a new campus policy Favor Oppose Freshman 30 20 Sophomore 40 30 Junior 20 10 Senior 10 10 Question Perform a chisquare test for independence to determine if there is a relationship between class standing and opinion on the new campus policy Use a significance level of 001 Answer 1 Hypotheses  $H_0$  Class standing and opinion on the campus policy are independent  $H_a$  Class standing and opinion on the campus policy are dependent 2 Expected counts Calculate the expected counts for each cell assuming independence using the formula Row Total Column Total Grand Total For example the expected count for Freshman who Favor the policy is  $60 \cdot 50 / 150 = 20$  3 Test statistic Calculate the chisquare statistic using the formula Observed Count Expected Count Expected Count  $\chi^2 = \sum \frac{(O - E)^2}{E}$  30 20 20 30 30 40 40 40 30 30 20 20 20 10 10 10 10 10 10 667 4 Degrees of freedom df number of rows 1 number of columns 1 4 1 2 1 3 5 Pvalue P 667 with df 3 0.084 using a chisquare table or calculator 6 Decision Since the pvalue 0.084 is greater than the significance level 0.01 we fail to reject the null hypothesis 7 Conclusion There is not enough evidence to conclude that there is a relationship between class standing and opinion on the new campus policy Note These answers are intended to provide a general structure and examples for a hypothetical AP Stats Quiz B Actual quiz questions and answers may vary based on specific content and level of difficulty 9
