this publication represents a significant achievement in our ongoing effort to ensure that everyone can reach the highest possible level of health over the last three decades we have seen the transformation of the pharmaceutical industry and the increasing intricacy of the product life cycle the challenges we face today are very different from those we faced when the first edition of this compendium was published in 1997 however our mission remains the same to promote health keep the world safe and serve the vulnerable the new edition reflects the collective knowledge and expertise of countless professionals who have worked diligently to develop revise and implement who guidelines for pharmaceuticals this includes experts from who member states our expert advisory panels and expert committees on specifications for pharmaceutical preparations and other organizations and has undergone extensive consultation with stakeholders worldwide this compendium covers development through manufacturing and quality control to post marketing surveillance it provides a comprehensive framework for quality assurance that is both strong and flexible capable of meeting the requirements of a rapidly changing global health landscape the 10th edition is a collection of knowledge and tools for empowerment enabling all stakeholders in the pharmaceutical industry to make informed decisions that prioritize patient safety and well being

the effect of corrosion in the oil industry leads to the failure of parts this failure results in shutting down the plant to clean the facility the annual cost of corrosion to the oil and gas industry in the united states alone is estimated at 27 billion according to nace international leading some to estimate the global annual cost to the oil and gas industry as exceeding 60 billion in addition corrosion commonly causes serious environmental problems such as spills and releases an essential resource for all those who are involved in the corrosion management of oil and gas infrastructure corrosion control in the oil and gas industry provides engineers and designers with the tools and methods to design and implement

comprehensive corrosion management programs for oil and gas infrastructures the book addresses all segments of the industry including production transmission storage refining and distribution selects cost effective methods to control corrosion quantitatively measures and estimates corrosion rates treats oil and gas infrastructures as systems in order to avoid the impacts that changes to one segment if a corrosion management program may have on others provides a gateway to more than 1 000 industry best practices and international standards

the next enterprise computing era will rely on the synergy between both technologies semantic web and model driven software development mdsd the semantic web organizes system knowledge in conceptual domains according to its meaning it addresses various enterprise computing needs by identifying abstracting and rationalizing commonalities and checking for inconsistencies across system specifications on the other side model driven software development is closing the gap among business requirements designs and executables by using domain specific languages with custom built syntax and semantics it focuses on using modeling languages as programming languages among many areas of application we highlight the area of configuration management consider the example of a telecommunication company where managing the multiple configurations of network devices routers hubs modems etc is crucial enterprise systems identify and document the functional and physical characteristics of network devices and control changes to those characteristics applying the integration of semantic web and model driven software development allows for 1 explicitly specifying configurations of network devices with tailor made languages 2 for checking the consistency of these specifications 3 for defining a vocabulary to share device specifications across enterprise systems by managing configurations with consistent and explicit concepts we reduce cost and risk and enhance agility in response to new requirements in the telecommunication area this book examines the synergy between semantic web and model driven software development it brings together advances from disciplines like ontologies description logics domain specific modeling model transformation and
