johannes kepler contributed importantly to every field he addressed he changed the face of astronomy by abandoning principles that had been in place for two millennia made important discoveries in optics and mathematics and was an uncommonly good philosopher generally however kepler's philosophical ideas have been dismissed as irrelevant and even detrimental to his legacy of scientific accomplishment here rhonda martens offers the first extended study of kepler's philosophical views and shows how those views helped him construct and justify the new astronomy martens notes that since kepler became a copernican before any empirical evidence supported copernicus over the entrenched ptolemaic system his initial reasons for preferring copernicanism were not telescope observations but rather methodological and

metaphysical commitments further she shows that kepler s metaphysics supported the strikingly modern view of astronomical method that led him to discover the three laws of planetary motion and to wed physics and astronomy a key development in the scientific revolution by tracing the evolution of kepler s thought in his astronomical metaphysical and epistemological works martens explores the complex interplay between changes in his philosophical views and the status of his astronomical discoveries she shows how kepler s philosophy paved the way for the discovery of elliptical orbits and provided a defense of physical astronomy s methodological soundness in doing so martens demonstrates how an empirical discipline was inspired and profoundly shaped by philosophical assumptions
