HowTo Section Mastering Hypothesis Testing Lets delve into a practical example of hypothesis testing Suppose you want to test whether the average salary of male and female employees in a company is equal

- 1 State the Hypotheses Null Hypothesis H_0 The average salary of male and female employees is equal Alternative Hypothesis H_1 The average salary of male and female employees is not equal
- 2 Choose a Significance Level Commonly 0.05 This represents the probability of rejecting the null hypothesis when its actually true Type I error
- 3 Select the Appropriate Test In this case an independent samples ttest would be suitable since were comparing the means of two independent groups
- 4 Calculate the Test Statistic and pvalue This is where statistical software comes in handy Excel SPSS or R can perform this calculation quickly
- 5 Interpret the Results If the pvalue is less than the significance level $p < 0.05$ we reject the null hypothesis and conclude theres a statistically significant difference in average salaries Otherwise we fail to

reject the null hypothesis
