a definitive guide to the depth and breadth of the ecological sciences revised and updated the revised and updated fifth edition of ecology from individuals to ecosystems now in full colour offers students and practitioners a review of the ecological sciences the previous editions of this book earned the authors the prestigious exceptional life time achievement award of the british ecological society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of ecology in the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems this fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology this new edition incorporates the results from more than a thousand recent studies into a fully up to date text written for students of ecology researchers and practitioners the fifth edition of ecology from individuals to ecosystems is an essential reference to all aspects of ecology and addresses environmental problems of the future
