Question 1 Describe the role of ATP in biological processes 4 marks **Answer** ATP adenosine triphosphate is the universal energy currency of cells Its role in biological processes is crucial for Metabolic reactions ATP provides the energy required for both anabolic and catabolic reactions including protein synthesis DNA replication and muscle contraction Active transport ATP powers the movement of molecules across cell membranes against their concentration gradients ensuring proper cell function and nutrient uptake Cellular signaling ATP is involved in various signaling pathways acting as a messenger molecule in processes like neurotransmission and cell division

Question 2 Explain how natural selection leads to evolution 6 marks **Answer** Natural selection is a key mechanism driving evolution It operates on the basis of variation inheritance and differential reproductive success

Variation Individuals within a population exhibit natural variations in their traits often due to genetic mutations

Inheritance These variations are passed on to offspring with advantageous traits being more likely to be inherited

Differential reproductive success Individuals with traits that better adapt them to their environment are more likely to survive reproduce and pass on their advantageous genes

3 Over time this leads to a gradual shift in the frequency of traits within a

population resulting in evolution

Question 3 Compare and contrast the structure and function of chloroplasts and mitochondria 8 marks

Answer Chloroplasts and mitochondria are both essential organelles found in eukaryotic cells While they share some similarities in structure and function they also exhibit distinct characteristics

Similarities Double membrane structure Both organelles have a double membrane system with an outer and an inner membrane Presence of DNA and ribosomes Both contain their own DNA and ribosomes indicating a degree of autonomy Energy production Both play a crucial role in energy production albeit in different ways Chloroplasts harness light energy for photosynthesis while mitochondria convert food into ATP via cellular respiration

Differences Location Chloroplasts are found only in plant cells while mitochondria are present in both plant and animal cells Pigmentation Chloroplasts contain chlorophyll giving them their green color while mitochondria lack pigmentation Function Chloroplasts are involved in photosynthesis converting light energy into chemical energy while mitochondria are responsible for cellular respiration converting food into usable energy
