laboratories and medical facilities

a history of modern architecture as a discursive practice

in this book first published in 1999 hershberger presents architectural programming and predesign management in a clear detailed manner with numerous examples and illustrations from both his and his colleagues experience he shows the reader step by step how to use the techniques of architectural programming set values resolve issues apply tested methods and leverage skills when working with clients this title will be of interest to students of architecture

architecture can be as full of suspense as a graphic novel similar to comic strips or graphic novels diagrams are a visual medium of communication this makes them easy to understand even across linguistic and cultural boundaries and an ideal method of communicating ideas to clients today architectural diagrams are no longer mere aids to explaining a design or reducing an idea to a simple outline but have emerged as an art form of their own among the creative skills related to planning and building the title architectural and program diagrams in the series construction and design manual brings together more than 400 pages from a predominantly international avant garde and offers an overview of the state of the art in architectural representation across a spectrum extending from simple arrow diagrams to sober graphs and highly elaborate often somewhat surreal collages and computer animations which trigger a wide range of intellectual and emotional responses diagrams tell stories those able to read them can follow the process by which ideas and thoughts take visual shape find aesthetic form and if all goes well become part of the built environment

since the 1980s the diagram has become a preferred method for researching communicating theorising and making architectural designs ideas and projects thus the rise of the diagram as opposed to the model or the drawing is the one of the most significant new developments in the process of design in the late 20th and early 21st centuries diagrams of architecture is the first anthology to represent through texts and diagrams the histories theories and futures of architecture through the diagram spanning the pre historic to the parametric diagrams of architecture illustrates over 250 diagrams and brings together 26 previously published and newly commissioned essays from leading international academics architects theorists and professional experts these combine to define the past and future of the diagram s discourse prefaced with a critical introduction by mark garcia each text investigates a central concept or dimension of the diagram ranging from socio cultural studies science philosophy technology cad cam computing and cyberspace and virtual digital design to methodology environment sustainability and phenomenological poetic and art architecture as well as interior urban engineering interactive and landscape design the first critical multidisciplinary book on the history theory and futures of the architectural diagram includes seminal articles on the diagram from the history and theory of architecture such as those by peter eisenman sanford kwinter mvrdiv neil spiller lars spuybroek un studio and anthony vidler features 14 newly commissioned articles by leading architects and theorists including charles jencks

hanif kara patrik schumacher neil spiller leon van schaik and alejandro zaera polo and two new interviews with will alsop and bernard tschumi includes a full colour critical collection of over 250 of the most significant and original diagrams many of which are previously unpublished in the history of architecture from around the world

first published in 1977 this volume was intended as a sourcebook for designers and attempts to specify the ingredients necessary to develop a design program rather than postulate a model program for which no consensus exists as such it filled a void in the existing literature which seldom covered programming with much depth and provides technical aids to guide designers the author attempts to integrate the pioneering contributions from others in order to identify the substance of programming for designers and represents a culling of the strategies and techniques from the social behavioural and management sciences building on the developing efforts of other disciplines
