this book presents simple design paradigms related to lightweight design that are derived from an in depth and theoretically sound analysis based on pareto theory it uses numerous examples including torsion and inflated tubes to fully explain the theories discussed lightweight construction principles begins by defining terms in relation to engineering design and optimal design of complex mechanical systems it then discusses the analytical derivation of the pareto optimal set before applying analytical formulae to optimal design of bent beams the book moves through numerous case studies of different beam and tube construction including beams subject to bending thin walled tubes under torsion and truss structures this book will be of interest to researchers and graduate students in the field of structural optimisation and multi objective optimization as well as to practitioners such as design engineers
